Individual Spirituality in Post-nonclassical Arts Education *Cambridge Scholars Publishing* This volume is a collective work bringing together Ukrainian researchers in the field of arts education. Professional artistic education in Ukraine is currently one of the most important directions of a person's spiritual and ideological development. It suggests that the spiritual development of an individual can be fulfilled through musical art. To this end, this book presents a set of methodological approaches and principles of post-nonclassical didactics allowing the formation of a new model of post-nonclassical knowledge in the system of professional artistic education. The results provided here will be of great practical importance, and can be used for drawing up special courses, methodological recommendations, and training guides on artistic disciplines. The volume, which has a role to play in the scientific reflection of new trends, will be useful to researchers, educationalists, students, and all those interested in the modern processes involved in the development of artistic education, and who are looking for new pathways for the cultural development of Ukraine, in the context of identifying the value of post-nonclassical culture. Young Children and Families in the Information Age Applications of Technology in Early Childhood *Springer* This edited book presents the most recent theory, research and practice on information and technology literacy as it relates to the education of young children. Because computers have made it so easy to disseminate information, the amount of available information has grown at an exponential rate, making it impossible for educators to prepare students for the future without teaching them how to be effective information managers and technology users. Although much has been written about information literacy and technology literacy in secondary education, there is very little published research about these literacies in early childhood education. Recently, the National Association for the Education of Young Children and the Fred Rogers Center for Early Learning and Children's Media at Saint Vincent College published a position statement on using technology and interactive media as tools in early childhood programs. This statement recommends more research "to better understand how young children use and learn with technology and interactive media and also to better understand any short- and long-term effects." Many assume that today's young children are "digital natives" with a great understanding of technology. However, children may know how to operate digital technology but be unaware of its dangers or its value to extend their abilities. This book argues that information and technology literacy include more than just familiarity with the digital environment. They include using technology safely and ethically to demonstrate creativity and innovation; to communicate and collaborate; to conduct research and use information and to think critically, solve problems and make decisions. Cincinnati Magazine Cincinnati Magazine taps into the DNA of the city, exploring shopping, dining, living, and culture and giving readers a ringside seat on the issues shaping the region. Creativity, Culture, and Development *Springer* This volume presents a collection of writings on the relations among creativity, culture and development. The editors invited "like-minded" researchers of creativity from around the world to share their respective notions of creativity. Given that human creativity is a potential that can and should be nurtured in the course of lifespan development and across all cultural backgrounds, the volume emphasizes the importance of promoting creativity in all cultures and through societal-educational opportunities, and offers a venue for the authors to make conceptual, empirical and practical inquiries into the relations among creativity, development and culture. The authors represent a varied "mix" of contemporary and emerging creativity researchers who use different methodologies to investigate the importance of culture in creativity development and the reciprocal role of developing creativity and cultural enrichment. The volume represents an attempt on the part of the editors and the authors to broaden our current understanding of creativity in the contexts of human and cultural development, and in so doing to enhance our understanding of creativity, culture and development in the contexts of flourishing human and societal activities. As the first volume in a book series on "Creativity in the Twenty-First Century", the book invites readers and researchers to engage in future interdisciplinary and intercultural discourses and dialogues on the importance of creativity for human and cultural development.
