The 737 MAX Tragedy and the Fall of Boeing

Penguin UK *'A startling investigation of the corporate blunders behind the tragedies that claimed the lives of 346 passengers.' - The Times 'A compelling, deeply reported account written in crisp, controlled anger...an indictment not just of one of America's most celebrated companies, but of an entire era.' - Financial Times 'An authoritative, gripping and finely detailed narrative that charts the decline of one of the great American companies.' - New York Times Book Review ----- Discover the corporate scandal that transfixed the world, cost hundreds of innocent lives, and almost destroyed a global institution. Boeing is a century-old titan of industry, having played a role in the early days of commercial flight, Second World War bombing missions and even moon landings. Yet in 2018 and 2019, two crashes of the Boeing 737 MAX 8 killed 346 people. The crashes exposed a shocking pattern of malfeasance, leading to the biggest crisis in the company's history - and one of the costliest corporate scandals ever. How did things go so horribly wrong? Flying Blind is the definitive account of the disasters that shocked the world; a chilling, behind-the-scenes look at the corporate dysfunction which contributed to one of the worst tragedies in modern aviation. It's an exposé of a reckless culture where - in a race to beat the competition and reward top executives - Boeing skimped on testing, pressured employees to meet unrealistic deadlines and ultimately convinced regulators to put planes into the air without properly equipping them or their pilots for flight. From award-winning Bloomberg investigative journalist Peter Robison, this is the story of a business gone wildly off course. At once endlessly fascinating and deeply disturbing, it shows how the iconic company fell prey to a win-at-all-costs mentality, threatening an industry and sacrificing countless lives. ----- 'An urgent, compelling and richly reported story of how the almighty profit motive supplanted a culture of engineering excellence, and the avoidable calamity that has impacted all of us as a result.' - Brad Stone, author of Amazon Unbound and The Everything Store 'A story everyone - every consumer, every citizen, every worker in every industry - needs to read.' - Diana B. Henriques, NYT bestselling author of The Death of Trust and The Wizard of Lies: Bernie Madoff 'The astoundingly well reported and beautifully told story of the downfall of what was once a great American company. A must-read.' - Bethany McClean, author of All The Devils Are Here and The Smartest Guys In The Room*

AIR CRASH INVESTIGATIONS, PILOT ERROR? The Crash of

Ethiopian Airlines Flight 409

Lulu.com On 25 January 2010, at 00:41:30 UTC, Ethiopian Airlines flight ET 409, a Boeing 737-800, on its way from Beirut to Addis Abeba, crashed just after take-off from Rafic Hariri International Airport in Beirut, Lebanon, into the Mediterranean Sea about 5 NM South West of Beirut International Airport. All 90 persons on board were killed in the accident. The investigation concluded that the probable causes of the accident were pilot errors due to loss of situational awareness. Ethiopian Airlines refutes this conclusion. Other factors that could have lead to probable causes are the increased workload and stress levels that have most likely led to the captain reaching a situation of loss of situational awareness similar to a subtle incapacitation and the F/O failure to recognize it or to intervene accordingly. Ethiopian Airlines refutes the investigation. According to the airline the final report was biased, lacking evidence, incomplete and did not present the full account of the accident.

Aviation and Its Management

Global Challenges and Opportunities

BoD - Books on Demand Aviation has grown leaps and bounds within the last decade. Aviation courses and training at all levels have shown an exponential increase around the globe. There has been a restricted focus on writing books in this sector of the economy, mainly due to the shortage of expertise in this specialist and complex area. This book was written with the purpose of meeting this need of the aviation sector. Due to the diversified nature of aviation knowledge, which includes flying, engineering, airports, allied trades for aircraft and airports, airline and airport management and operations, education, etc., one text alone will not suffice and do justice to address all these areas. It is envisaged to develop subsequent parts of this book to cover all these knowledge areas. This book is the first installment of any subsequent books and explores issues including airline management and operations, airline business models, airport systems, flight operational procedures, aircraft maintenance, runway safety management systems, and air traffic management. In particular, attention will be given to aspects such as analysis of air traffic in a domestic market, runway safety management systems, critical success factors for multiple MRO service providers, key pain points of the industry to be addressed to move into the future, new research on hub airports for international flights, new business models for airlines, and runway safety management systems. This book is useful to aviation managers, educators, students, and professionals interested in any of the above issues.
