Logic Pro X - the Details

A New Type of Manual - the Visual Approach

CreateSpace "**Logic Pro X - The Details**", from the best-selling GEM series (Graphically Enhanced Manuals), is the follow-up book of "**Logic Pro X - How it Works**". It explains all the remaining features in Logic Pro X with the same style by using rich illustrations and diagrams that are not found in any other manual. This is the first time that even beginners and intermediate Logic users can explore the more advanced features in Logic due to that easy to understand, visual approach of this manual. The book is up to date with the latest Logic Pro X v10.0.7 and its new features and functionality. Due to the limitation of the print-on-demand books, this book is divided into two parts as the paperback versions. Here is the content of the Part 1 and Part 2: Part 1 1 - Introduction: About the GEM series 2 - Workflow: The most important and most underrated topic when using Logic is how to use it efficiently. That's why I start the book with that chapter. 3 - Advanced Editing: To really become a Logic "Pro-user", you need all the available editing tools on your Logic tool belt. 4 - Flex Introduction: Finally, Audio Regions have the same freedom when it comes to editing as their MIDI Region counterparts. 5 - Flex Time: No time restrictions for Audio Regions anymore. No matter what tempo an audio file was recorded in, you can change it and even quantize it. 6 - Flex Pitch: If you ever wanted to change the pitch information in Audio Regions but couldn't afford the Melodyne app or couldn't (under-)stand it, then Logic has the most easy to use tool for you. 7 - Browsers: The three Browsers in Logic don't get the same respect from their users. Either they frown upon Apple Loops or don't know what to do with the Media Browser in the first - now you will. 8 - Audio File Management: The problem with having a lot of stuff is how to

manage that stuff. This is also true for all the Logic related files. You better learn how to manage them before you start to lose them. 9 - Advanced Audio: There is much more to Audio in Logic that meets the eyes. I dive into all those pro features Logic has to offer to show you what is going on under the hood. 10 - Advanced MIDI: You can also advance your knowledge about the MIDI features in Logic, in addition to its audio features. 11 - Automation: Find out everything about Automation in Logic Pro, both Automations (yes there are two) and there are hidden secrets too. Part 2 12 - Music Notation: There are applications just for music notation. With Logic, that is included. No matter if you want to print out a single melody or an entire orchestral score - you can do it. 13 - Tempo & Time: Tempo and Time seems to be easy topics on the outside. But be warned, this chapter goes deep, where no other manual has gone before. 14 - Working to Picture: Logic is the best and most popular DAW when it comes to scoring to picture. Learn all the stuff you need to know - to do exactly that. 15 - Synchronization: If you made it through the Tempo & Time chapter, then this one is the right chapter for you with lots of information beyond Logic. 16 - The Environment: The scariest place in Logic, sending shivers down the spine of most Logic users - unless you know your way around ... then all of a sudden it becomes the most powerful place in Logic. 17 - Surround Sound: If two speakers are not enough to do your Project good, then it's time to move up to the world of Surround Sound. 18 - Control Surfaces: Logic will also surrender to outside powers. Learn how to use and setup those devices, no matter

Proceedings of the Annual Meeting - Highway Research Board Visual Object Recognition

Springer Nature The visual recognition problem is central to computer vision research. From robotics to information retrieval, many desired applications demand the ability to identify and localize categories, places, and objects. This tutorial overviews computer vision algorithms for visual object recognition and image classification. We introduce primary representations and learning approaches, with an emphasis on recent advances in the field. The target audience consists of researchers or students working in AI, robotics, or vision who would like to understand what methods and representations are available for these problems. This lecture summarizes what is and isn't possible to do reliably today, and overviews key concepts that could be employed in systems requiring visual categorization. Table of Contents: Introduction / Overview: Recognition of Specific Objects / Local Features: Detection and Description / Matching Local Features / Geometric Verification of Matched Features / Example Systems: Specific-Object Recognition / Overview: Recognition of Generic Object Categories / Representations for Object Categories / Generic Object Detection: Finding and Scoring Candidates / Learning Generic Object Category Models / Example Systems: Generic Object Recognition / Other Considerations and Current Challenges / Conclusions
