ADVANCES IN STREPTOCOCCACEAE RESEARCH AND APPLICATION: 2012 EDITION

ScholarlyEditions **Advances in Streptococcaceae Research and Application / 2012 Edition** is a **ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Streptococcaceae. The editors have built Advances in Streptococcaceae Research and Application / 2012 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Streptococcaceae in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Advances in Streptococcaceae Research and Application / 2012 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. ACID PROTEASES: STRUCTURE, FUNCTION, AND BIOLOGY

Springer Science & Business Media **In the past ten years, a number of proceedings of symposia on the structure and function of proteolytic enzymes have been published. Their coverage of acid proteases has been limited, mainly due to the lack of significant new information on the structure of these enzymes. In the last four years, however, the primary and tertiary structures of a number of acid proteases have been determined, prompting the need to discuss the meanings of the old data and the possibilities for new experimentations. It was for this purpose that the "Conference on Acid Proteases: Structure, Function, and Biology" was organized. It took place at the University of Oklahoma on November 21-24, 1976. This book is a collection of the main lectures delivered at the Conference. Acid Proteases, by definition refers to a group of proteases having an optimal pH in acidic solutions. The classic examples are pepsin and chymosin. Some catalytic features are obviously shared by these proteases, most notably, their inhibition by pepstatin. The use of active center-directed inactivators such as diazoacetyl norleucine methyl ester and 1,2-epoxy-3-(p-nitrophenoxy)propane has shown that two catalytic aspartyl residues are present in most of these enzymes. These apparent common features have prompted the suggestion by several investigators to name this group of enzymes "aspartyl proteases" or "carboxyl proteases".**

MUCOSAL IMMUNOLOGY

Academic Press **Mucosal Immunology, now in its fourth edition, is the only comprehensive reference covering the basic science and clinical manifestations of mucosal immunology. Most infectious agents enter the body through the various mucous membranes, and many common infections take place in or on mucous membranes, making this subject an area of singular importance in the field of immunology. This book contains new research data, exceptional illustrations, original theory, a new perspective, and excellent organization. It covers immune system topics, such as inductive and effector tissues and cells, and development and physiology of the mucosal barrier; diseases in the digestive system,**

respiratory tract, and genitourinary tract; and immunodeficiency. The most comprehensive text on mucosal immunology from internationally recognized experts in the field Includes exceptional color illustrations, new research data, original theory and information on all mucosal diseases Contains nine new chapters and an expanded appendix

ADVANCES IN HIV TREATMENT

Bentham Science Publishers **Advances in HIV Treatment: HIV Enzyme Inhibitors and Antiretroviral Therapy** presents comprehensive and updated information on drug therapies used to treat and manage HIV infection in human patients. The volume is organized in to chapters detailing respective classes of HIV Drugs including HIV entry inhibitors, reverse transcriptase inhibitors (RTIs), integrase strand inhibitors (INSTIs), and protease inhibitors (PIs). Each chapter compiles background information, pharmacology and clinical aspects such as side effects on the specific classes of drugs represented. Available data for ongoing research for new targets, including vaccines is also presented. Readers will also find a useful introduction to HIV virology and pathogenesis as well as a comparison of the availability and activity of these agents in different populations, opening a discussion on the influence of genetics and resources in curbing the HIV epidemic. **Advances in HIV Treatment: HIV Enzyme Inhibitors and Antiretroviral Therapy** is, therefore, a holistic resource for researchers, healthcare professionals and clinicians interested in understanding antiretroviral drugs and the management of HIV infection/AIDS. The volume is also of interest to undergraduate and graduate students undertaking specialized courses in pharmacology and HIV/AIDS management.

KININS IIB : SYSTEMIC PROTEASES AND CELLULAR FUNCTION

Springer In this brief historical retrospect of kinin studies, we recall the discovery of bradykinin by Professor M. Rocha e Silva and the pioneer investigations on tissue kallikrein initiated by Dr. E.K. Frey followed by the work of Professor H. Kraut and Professor E. Werle who opened the way for the present flourishing investigations of kinins. The elucidation of the structure of bradykinin by Dr. F. Elliott in 1960 stimulated further research of the vasoactive peptides. During the following years, the physiological and pathological significance of kinins was explored regarding their potential importance. Tremendous progress in our understanding of the involvement of the kallikrein-kinin system in many physiological phenomena has been facilitated by the friendly atmosphere among "kininologists" engendered at previous international kinin symposia. During that time studies were reported as to the role of kinins in functional vasodilation, alteration of blood pressure and vascular permeability, shock, inflammation, and pain production. Thus, through knowledge from these basic studies, the action of kinins in morbidity is better understood as are the counter measures for many diseases associated with kinin formation. Recent discoveries have focused on abnormally delayed blood coagulation in the hereditary deficiency of high molecular weight kininogen together with prekallikrein deficiency. Thus great strides have been made in elucidating the interrelationships amongst the blood coagulation, fibrinolysis, and vasoactive kinin systems. Moreover, apart from the aforementioned role of bradykinin as a pharmacologically active substance, other important findings involving the coordinated actions of prostaglandin and catecholamine biosynthesis, particularly in the inflammatory process, have enhanced our appreciation of the complexity of the vasoactive kinin system. The participation of more than 330 scientists from 16 countries of the world in this International Symposium on Kinins-Kinin '78 Tokyo reflects accurately the interest and research activity in the diverse and broad implications of the physiological and pathological functions of the kallikrein-kinin system. A total of 128 papers, including posters, were presented, attesting to the unquestioned success of the KININ '78 TOKYO Symposium. This volume in tow sections contains the collective studies presented, studies of high scientific standard that provoked lively discussions. A son included in this volume are the two plenary lectures presented by Dr. K. Austen (USA) and Dr.

Hamao Umezawa (JAPAN).

THE IMMUNOGLOBULIN A SYSTEM

Springer Science & Business Media The International Symposium on the Immunoglobulin A System was organized in observance of the twenty-fifth anni versary of the School of Dentistry of the University of Ala bama in Birmingham. Immunoglobulin A was chosen as the sub ject of the Symposium because of its broad scope in relation to all biologic sciences, as well as for its particular rele vance to prevention of the most common human disease--dental caries. More than 500 scientists, from 13 countries, met in Birmingham, Alabama to review critically past and current research on IgA and to outline goals for integrating future investigations of the many facets of the IgA system. It is our pleasure to

express sincere appreciation to the following, whose efforts made the Symposium possible: to Dr. Sidney B. Finn, Chairman, and all members of the Twenty fifth Anniversary Planning Committee for their advice and assistance; to Dr. Charles A. McCallum, Dean of the School of Dentistry, for his enthusiastic approval and support; to Dr. Frederick W. Kraus, Symposium Chairman, for the countless hours of meticulous planning that ensured the smooth execution of the Symposium; to Ms. Tonia C. Maddox whose unstinting dedication was indispensable to the organizational success of the meeting; to those who assisted with the transcription of manuscripts and discussions: Ms. Shirley Snow, Ms. Jan Allen, Ms. Janice Buchanan, Ms. Joy Fisher, Ms. Pam Honeycutt, Ms. Mary Huckabee, Ms. Charlotte Hughes, Mr. Stephen Miles, Ms.

KININS--III

Since the discovery of kallikrein by the Munich surgeon E.K. Frey (1925) and the elucidation by E. Werle (1936) of the basic biochemical mechanisms which lead to kinin liberation from kininogens by kallikreins or to kinin degradation by kininases, this KKKK field has become a promising subject for basic and applied research. The 'Munich kid', the kallikrein, was found to be involved in important mechanisms of the organism and has attracted special medical interest. The International Conference 'Kinin 81 Munich', held November 2nd - 5th, 1981, covered all aspects of the KKKK systems and related fields. The recent progress was presented in 265 contributions, 93 lectures and 172 posters, and discussed by nearly 400 scientists from 27 countries. This volume contains chiefly the lectures presented during the Conference.

MOLECULAR BIOLOGY OF SPIROCHETES

IOS Press Diseases produced by spirochetes, including Lyme borreliosis, syphilis and leptospirosis, are on the rise worldwide, and because the biology of their causative organisms, their epidemiology, and clinical presentation display important variations in different geographical areas. For example *B. burgdorferi sensu lato* produces approximately 20,000 cases of Lyme borreliosis a year in the United States and 60,000 cases in Europe, but *B. burgdorferi sensu stricto*, *B. afzelii* and *B. garinii* are transmitted by different vectors and have different reservoirs and clinical presentations in these different geographic areas. Awareness and better understanding of these variations by researchers in the field is thus highly relevant to improvements in their prevention and treatment, and critical for improvement of human health. This volume focuses on a series of state of the art presentations of the research taking place in the laboratories of the contributors. As such, it may be useful as an introduction to those individuals entering in the burgeoning field of spirochete research. This book could serve as a stimulus for researchers in the field to widen collaborations and exchanges between investigators in the different geographical areas where spirochetal diseases are common since these interactions can only be of benefit to the field.
