Patty's Industrial Hygiene, 4-Volume Set

John Wiley & Sons Since the first edition in 1948, *Patty's Industrial Hygiene and Toxicology* has become a flagship publication for Wiley. In the course of its nearly six decades in print, it has evolved into a standard reference for the fields of occupational health and toxicology. The volumes on Industrial Hygiene are cornerstone reference works for chemists, engineers, toxicologists, and occupational safety personnel. Since the 5th edition was published, the field of IH has changed with personnel often working for multinational firms, self-employed, at small consulting firms. Their environment has changed and expanded, and thus also the types of information and resources required have changed. The traditional areas of interest to occupational health and safety professionals include anticipation, recognition, evaluation and control of potential hazards. In addition to these, the 6th edition provides information and reliable resources to prepare for natural disasters, exposures to biological agents and potential acts of terrorism.

Practical Occupational Medicine 2Ed

CRC Press The second edition of *Practical Occupational Medicine* bridges the gap between day-to-day clinical practice, concerned primarily with diagnosis and treatment of disease, and occupational health practice which is concerned with the prevention of work-related disease and the management of ill health in relation to the workplace. Prudent Practices for Safety in Laboratories is essential reading for people working with laboratory chemicals: research chemists, technicians, safety officers, chemistry educators, and students.

Pesticides and Human Health

Springer Science & Business Media The impetus for this book came from numerous requests by public and private agencies and citizens for information regarding the human health effects of pesticide exposures. We have tried to compile a relatively complete, concise summary of the acute and chronic health effects and the toxicology of pesticides in a format that provides quick and easy access. This book was written to address the needs of the following groups: medical and public health professionals, toxicologists, environmentalists, industrial hygienists, regulators, producers and users of pesticides, public interest advocates, and the legal profession. Acknowledgments We are indebted to Mr. Christopher J. Wiant, Chief of the Environmental Chemistry Section of the Illinois Department of Public Health. The financial support provided by his office was essential in producing this book. We are also indebted to Dr. Charles Benbrook, former staff member, and Representative George E. Brown, Chairman of the Subcommittee on Department Operations, Research and Foreign Agriculture of the Committee on Agriculture, United States House of Representatives, for their guidance in obtaining pesticide toxicity data. In the Freedom of Information Office, Office of Pesticide Programs of the United States Environmental Protection Agency, the patience and assistance of Therese Murtagh and Virginia Salzman in obtaining documents are appreciated. Of the numerous individuals who participated in the production of this book, the following merit special recognition for the quality of their research, editing, and critical skills: Mark Loafman, Sue Ramirez, Steve Smith, Sally Burns, and Denise Steurer.

Acute Exposure Guideline Levels for Selected Airborne Chemicals

National Academies Press At the request of the Department of Defense and the Environmental Protection Agency, the National Research Council has reviewed the relevant scientific literature compiled by an expert panel and established Acute Exposure Guideline Levels (AEGs) for several chemicals. AEGs represent exposure levels below which adverse health effects are not likely to occur and are useful in responding to emergencies, such as accidental or intentional chemical releases in community, workplace, transportation, and military settings, and for the remediation of contaminated sites. Three AEGs are approved for each chemical, representing exposure levels that result in: 1) notable but reversible discomfort; 2) long-lasting health effects; and 3) life-threatening health impacts. This volume in the series includes AEGs for bis-chloromethyl ether, chloromethyl methyl ether, chlorosilanes, nitrogen oxides, and vinyl chloride.

Modern Chemical Technology and Emission Control

Springer Science & Business Media This text of applied chemistry considers the interface between chemistry and chemical engineering, using examples of some of the important process in dustries. Integrated with this is detailed consideration of measures which may be taken for avoidance or control of potential emissions. This new emphasis in applied chemistry has been developed through eight years of experience gained from working in industry in research, development and environmental control fields, plus twelve years of teaching here using this approach. It is aimed primarily towards science and engineering students as well as to environmentalists and practising professionals with responsibilities or an interest in this interface. By providing the appropriate process information back to back with emissions and control data, the potential for process fine-tuning is improved for both raw material efficiency and emission control objectives. This approach also emphasizes integral process changes rather than add-on units for emission control. Add-on units have their place, when rapid action on an urgent emission problem is required, or when control simply is not feasible by process integral changes alone. Obviously fundamental process changes for emission containment are best conceived at the design stage. However, at whatever stage process modifications are installed, this approach to control should appeal to the industrialist in particular, in that something more substantial than decreased emissions may be gained.
