## Therapeutic Alliances with Families

## Empowering Clients in Challenging Cases

Springer This practical breakthrough introduces a robust framework for family and couples therapy specifically designed for working with difficult, entrenched, and court-mandated situations. Using an original model (the System for Observing Family Therapy Alliances, or SOFTA) suitable to therapists across theoretical lines, the authors detail special challenges, empirically-supported strategies, and alliance-building interventions organized around common types of ongoing couple and family conflicts. Copious case examples illustrate how therapists can empower family members to discover their agency, find resources to address tough challenges, and especially repair their damaged relationships. These guidelines also show how to work effectively within multiple relationships in a family without compromising therapist focus, client individuality, or client safety. Included in the coverage: Using the therapeutic alliance to empower couples and families Couples' cross-complaints Engaging reluctant adolescents...and their parents Parenting in isolation, with or without a partner Child maltreatment: creating therapeutic alliances with survivors of relational trauma Disadvantaged, multi-stressed families: adrift in a sea of professional helpers Empowering through the alliance: a practical formulation Therapeutic Alliances with Families offers powerful new tools for social workers, mental health professionals, and practitioners working in couple and family therapy cases with reluctant clients and seeking specific, practical case examples and resources for alliance-related interventions.

## Emergency Psychiatry

### Concepts, Methods, and Practices

Springer Science & Business Media This eagerly awaited volume occupies an important place in the series Critical Issues in Psychiatry. Most mental health professionals are quite at home with ordinary day-to-day crises of clinical practice but relatively unprepared for the true psychiatric emergency. Such emergencies are too infrequent for most of us to experience a real sense of competence. On the other hand, emergency room psychiatrists as well as residents and other trainees have long wished for a truly comprehensive textbook that would cover the spectrum of emergency psychiatry. This book is just such a definitive and comprehensive volume for the specialist, while at the same time a clear, succinct, and comprehensive reference for the clinician of emergency care. The authors consistently present a systematic model emphasizing the interconnection between the process of emergency intervention and the specific features of clinical crisis. They are true to the principle that one's system of care should be built on priorities. It is immediately apparent that these are highly experienced clinicians as well as teachers. It is difficult to imagine a clinical situation that is not addressed by this book. It includes chapters on triage, assessment, and treatment planning; emergencies associated with all the various psychopathologies; age groups from childhood to old age; the emergency management of violent and suicidal patients as well as rape and disaster victims; emergencies secondary to substance abuse and prescribed medications; psychotherapeutic and psychopharmacologic intervention; as well as the relevant legal, social, and community issues in emergency care.

## Childhood Aggression and Violence

### Sources of Influence, Prevention, and Control

Springer Science & Business Media The conference on which this volume is based was one of a series of symposia initiated by the Department of Psychology at the University of Hawaii at Manoa on the theory and research surrounding topics of interest to the faculty and germane to the Hawaiian community. In order to encourage interaction around specific themes, the symposium series has assembled a small, select group of scholars to exchange knowledge, ideas, and enthusiasm with the resident faculty, students, and the community at large. The first two symposia concentrated on cross-cultural themes (Marsella, Tharp, & Ciborowski, 1979; Marsella, DeVos, & Hsu, 1985). The third one addressed a significant social problem: aggression and violence in children. At the time that our plan was being developed, Hawaii, along with mainland states, was experiencing or at least expressing widespread alarm over the involvement of children and youth in violent crime, in belligerence at school, as perpetrators of aggression at home, and as victims of physical abuse. This symposium was planned around a major area within the department, the Clinical Studies Program. The Clinical Studies Program has developed along two interrelated lines of concentration: one emphasized the foundation of clinical psychology in basic science and the other expanded its purview into the broader community, covering prevention, systems change, and social networks.

## HOME IS WHERE THE ART IS

### An Art Therapy Approach to Family Therapy

Charles C Thomas Publisher This work reflects the author's three decades of clinical practice with children and their families, and adults and their families. Written for students and professionals, this book integrates the two approaches: art therapy and family systems. Although much has been written on art therapy and much, much more literature exists on family therapy, few integrate the two theoretical approaches. The structure of this book reflects the author's personal approach to art. Her art media are painting and combining found objects. The overall theme of family can quickly be seen within it, but this theme is overlaid with art, archetypal patterns and meanings, and symbolic enactments. It is also interfaced with personality development, and in this 'era of the brain,' with neurobiological research. The introduction begins with a brief introduction to Randy and his Dad and Stepmother. Chapter Two begins with the question: 'What is a family?' Chapter Three introduces the reader to the 'Cycle of Love' and the family influences in personality development, seen in personality theorists and theories (e.g., Freud, Jung, attachment and object relations, Eriksson, and Piaget). Stories about Michelle, Elizabeth, Tucker and Carl provide theoretical examples. Since more and more family therapy practice includes violence associated with the unmet basic human needs of nourishment and nurturing, Chapter Four, 'The Cycle of Violence,' begins with a discussion of violence and its effect on early childhood environments. Chapter Five continues the theme of violence within families, and Chapter Six, 'The Cycle of Healing,' includes a discussion of resilience illustrated by a variety of stories from an integration of family and art therapy. Appendix A is filled with the practical 'how to's' of family art therapy. Appendix B includes the 'how to' interventions, and Appendix C includes key terms and concepts of a select group of family therapy theorists.

## Handbook of Family Theories

### A Content-Based Approach

Routledge Organized by content areas rather than by theory, this comprehensive, accessible handbook helps readers gain greater insight into how key theories have impacted today's family research. Most competing books, organized by theory, do not provide a strong sense of the links between theory and research. Using the 2000 and 2010 decade-in-review issues of the Journal of Marriage and Family as a resource, the book addresses the most important topics impacting family studies research today. The introductory chapter, written by the editors, provides an overview of the role family theories have had on the field. This chapter is followed by 23 others on family-related content areas written by renowned scholars in the field. The book is organized around the most important domains in the field: parenting and parent-child relationships, romantic relationships, conflict and aggression, structural variation and transitions, demographic variations, and families and extra-familial institutions. Each of the contributors describes how theory has been used to generate new knowledge in the field and suggests future directions for how theory may be used to extend our knowledge base. The book helps readers acquire a working knowledge of the key family science theories, findings, and issues and understand how researchers make use of these theories in their empirical efforts. To maximize accessibility, each of the renowned contributors addresses a common set of issues in their chapter: • Introduction to the content area • Review of the key topics, issues, and findings • A description of each of the major theories used to study that particular content area • Limitations of the theories • Suggestions for better use of the theories and/or new theoretical advances • Conclusions about future theoretical developments. An ideal text for graduate and/or advanced undergraduate family theories courses, this book's unique organization also lends itself to use in content-based family studies/science courses taught in family studies, human development, psychology, sociology, communication, education, and nursing. Due to its comprehensive and current approach, the book also appeals to scholars and researchers in these areas.
