#### QUEST FOR THE KILLERS

---

Springer Science & Business Media The five stories in this book are tales about human beings and the human condition in which they find themselves. They are stories of scientists - but not of white-coated laboratory figures, happy to leave to others the practical application of their discoveries. In the circumstances I recount, the scientists were brought face to face, sometimes in dramatic confrontations, with the very people whose problems their work might help solve. As I came to realize, there now exists an international network of unusual scientists whose members are concerned individuals, determined that their scientific work should help alleviate the human condition. This book was conceived as an account of some exciting episodes in contemporary biomedicine. But during the four years it took to complete, several other themes emerged. First, each story illustrates aspects of the relation between Western science and technology and those major health problems which are often of dreadful significance for the Third World. In this relation the fruits of Western research are not simply applied to global health problems. Rather the relation is reciprocal, for scientific research, whether prompted by the medical problems of the Third World or actually conducted there, is yielding vital clues to many fundamental aspects of human biology, as well as pointing toward possible therapies for the serious diseases of Western society, such as cancer or the dementia of old age. After I had written the first draft a second theme emerged.

#### A STUDENT TEXTBOOK

---

Waterside Press A superbly targeted resource for those learning about serial killings. Serial Killers and the Phenomenon of Serial Murder examines and analyses some of the best known (as well as lesser) cases from English criminal history, ancient and modern. It looks at the lifestyles, backgrounds and activities of those who become serial killers and identifies clear categories of individuals into which most serial killers fall. Led by Professor David Wilson the authors are all experts and teachers concerning the ever-intriguing subject of serial killing: why, when and how it happens and whether it can be predicted. Taking some of the leading cases from English law and abroad they demonstrate the patterns that emerge in the lives and backgrounds of those who kill a number of times over a period. The book is designed for those studying the topic at advanced level, whether as an academic discipline on one of the many courses now run by universities and colleges or as a private quest for understanding. It contains notes on key terms and explanations of topics such as co-activation, Munchausen syndrome, cooling-off period, psychopathy checklist, social construction, case linkage, family annihilation, activity space, rational choice theory, medicalisation and rendezvous discipline. As the first textbook of its kind it will be an invaluable resource for teachers and students of serious crime.

#### MURDERERS, MINDHUNTERS, AND MY QUEST TO DECIPHER THE CRIMINAL MIND

---

Hachette UK A vivid behind-the-scenes look into the creation of the FBI's Behavioral Science Unit and the evolution of criminal profiling, written by the pioneering forensic nurse who transformed the way the FBI studies, profiles, and catches serial killers. Lurking beneath the progressive activism and sex

positivity in the 1970-80s, a dark undercurrent of violence rippled across the American landscape. With reported cases of sexual assault and homicide on the rise, the FBI created a specialized team—the "Mindhunters" better known as the Behavioral Science Unit—to track down the country's most dangerous criminals. And yet narrowing down a seemingly infinite list of potential suspects seemed daunting at best and impossible at worst—until Dr. Ann Wolbert Burgess stepped on the scene. In *A Killer By Design*, Burgess reveals how her pioneering research on sexual assault and trauma caught the attention of the FBI, and steered her right into the middle of a chilling serial murder investigation in Nebraska. Over the course of the next two decades, she helped the budding unit identify, interview, and track down dozens of notoriously violent offenders, including Ed Kemper ("The Co-Ed Killer"), Dennis Rader ("BTK"), Henry Wallace ("The Taco Bell Strangler"), Jon Barry Simonis ("The Ski-Mask Rapist"), and many others. As one of the first women trailblazers within the FBI's hallowed halls, Burgess knew many were expecting her to crack under pressure and recoil in horror—but she was determined to protect future victims at any cost. This book pulls us directly into the investigations as she experienced them, interweaving never-before-seen interview transcripts and crime scene drawings alongside her own vivid recollections to provide unprecedented insight into the minds of deranged criminals and the victims they left behind. Along the way, Burgess also paints a revealing portrait of a formidable institution on the brink of a seismic scientific and cultural reckoning—and the men forced to reconsider everything they thought they knew about crime. Haunting, heartfelt, and deeply human, *A Killer By Design* forces us to confront the age-old question that has long plagued our criminal justice system: "What drives someone to kill, and how can we stop them?" ### QUEST FOR A KILLER

---

Grub Street Publishers The definitive investigation, “full of colorful details and sensational speculations—for those who enjoy whodunits with a bit of real history” (Book News). For more than a hundred and twenty years, the identity of the Whitechapel murderer known to us as Jack the Ripper has both eluded us and spawned a veritable industry of speculation. This book names him. Mad doctors, Russian lunatics, bungling midwives, railway policemen, failed barristers, weird artists, royal princes, and white-eyed men. All of these and more have been put in the frame for the Whitechapel murders. Where ingenious invention and conspiracy theories have failed, common sense has floated out of the window. M. J. Trow, in this gripping historical reinvestigation, cuts through the fog of speculation, fantasy, and obsession that has concealed the identity of the most famous serial murderer of all time.

### A THIRTY-YEAR QUEST TO BRING TWO KILLERS TO JUSTICE

---

WildBlue Press The true story of a 1984 murder and the lengths one man went to in order to achieve justice for his brother's killing. The moment he found out his brother was missing and presumed dead, Ted Kergan launched a relentless effort to bring two suspected killers—a teenage prostitute and her much older grifter boyfriend—to justice and find Gary Kergan's body. Little did he know his quest would consume a fortune and take thirty years to reach its conclusion. Thwarted at first by the fact that his brother's body could not be located and a new district attorney was therefore reluctant to prosecute, Kergan had to keep track of the killers from New Orleans's notorious French Quarter to Las Vegas and points in between, waiting for a break in the case that seemed like it would never come. Then nearly thirty years later, science, detective work, and a brother's love and tenacity would combine for a resolution that would end in a dramatic trial in which a killer's diary would be a star witness. “A tremendous story of love and murder, faith and tenacity.”—Steve Jackson, New York Times–bestselling author of *A Clockwork Murder* “A deeply moving story of powerful devotion.”—Anthony Flacco, New York Times–bestselling author of *A Checklist for Murder*

## THE BROOKWOOD KILLERS

---

## MILITARY MURDERERS OF WWII

---

Frontline Books Nestled deep in the Surrey countryside stands the Brookwood 1939-1945 Memorial. Maintained by the Commonwealth War Graves Commission, its panels contain the names of nearly 3,500 men and women of the land forces of Britain and the Commonwealth who died in the Second World War and who have no known grave. Among the men and women whose names are carved on the memorial are Special Operations Executive agents who died as prisoners or while working with Allied underground movements, servicemen killed in the various raids on enemy occupied territory in Europe, such as Dieppe and Saint-Nazaire, men and women who died at sea in hospital ships and troop transports, British Army parachutists, and even pilots and aircrew who lost their lives in flying accidents or in aerial combat. But the panels also hide a dark secret. Entwined within the names of heroes and heroines are those of nineteen men whose last resting place is known, and whose deaths were less than glorious. All were murderers who, following a civil or military trial, were executed for the heinous offence they had committed. The bodies of these individuals, with the exception of one, lay buried in un-consecrated ground. As Paul Johnson reveals, the cases of the 'Brookwood Killers' are violent, disturbing and often brutal in their content. They are not war crimes, but crimes committed in a time of war, for which the offender has their name recorded and maintained in perpetuity. Something that is not always applied in the case of the victim.

## THE TIME KILLERS

---

Lulu.com Haven't you ever wondered where time comes from, or what it's made of? Does it go on endlessly, or is there just a certain amount of it, like grains of sand in an egg timer? Is every bit of time the same as every other, or are there different types here and there? Why do some people struggle to cope if they have too much time, whilst others never seem to be able to find enough? What if time works differently for some people? People like Timothy Swift, for instance. He's always trying to find some time, to make time, to buy a little time...because he always has too much to do, and never enough time to do it in. But the funny thing is, no matter how little time Timothy has, he somehow gets everything done. And, remarkably, even when he doesn't have a single moment to spare, he can almost always find enough time to do one more thing. And what about dreams? Does time work the same in dreams?

### THE SCIENTIFIC ATTITUDE

---

Guilford Press THE SCIENTIFIC ATTITUDE presents a systematic account of the cognitive and social features of science. Written by an experimental biologist actively engaged in research, the work is unique in its attempt to understand science in terms of day-to-day practice. The book goes beyond the traditional description of science that focuses on method and logic to characterize the scientific attitude as a way of looking at the world. Professor Grinnell uses examples from biomedical research to describe science at three interdependent levels. At the first level, the individual scientist makes observations, formulates hypotheses, and does experiments. The scientist's thought style determines what can be seen and what it will appear to mean. At the second level, scientists participate in social institutions such as graduate programs, research groups, journal editorial boards, and grant review panels. Each of these institutions tries to promote its own distinctive collective thought style. Finally, at the third level, scientists participate in the world of everyday life beyond science, a world that continuously influences and is influenced by the activities and discoveries of science.
