Air Crash Investigations: Hard Landing Kills 9, the Crash of Turkish Airlines Flight TK 1951 on Amsterdam Schiphol Airport

Lulu.com On 25 February 2009 a Boeing 737-800, flight TK1951, operated by Turkish Airlines was flying from Istanbul in Turkey to Amsterdam Schiphol Airport. There were 135 people on board. During the approach to the runway at Schiphol airport, the aircraft crashed about 1.5 kilometres from the threshold of the runway. This accident cost the lives of four crew members, and five passengers, 120 people sustained injuries. The crash was caused by a malfunctioning radio altimeter and a failure to implement the stall recovery procedure correctly.

Boeing 737

The World's Most Controversial Commercial Jetliner

Air World The Boeing 737 is an American short- to medium-range twinjet narrow-body airliner developed and manufactured by Boeing Commercial Airplanes, a division of the Boeing Company. Originally designed as a shorter, lower-cost twin-engine airliner derived from the 707 and 727, the 737 has grown into a family of passenger models with capacities from 85 to 215 passengers, the most recent version of which, the 737 MAX, has become embroiled in a worldwide controversy. Initially envisioned in 1964,

the first 737-100 made its first flight in April 1967 and entered airline service in February 1968 with Lufthansa. The 737 series went on to become one of the highest-selling commercial jetliners in history and has been in production in its core form since 1967; the 10,000th example was rolled out on 13 March 2018. There is, however, a very different side to the convoluted story of the 737's development, one that demonstrates a transition of power from a primarily engineering structure to one of accountancy, number-driven powerbase that saw corners cut, and the previous extremely high safety methodology compromised. The result was the 737 MAX. Having entered service in 2017, this model was grounded worldwide in March 2019 following two devastating crashes. In this revealing insight into the Boeing 737, the renowned aviation historian Graham M. Simons examines its design, development and service over the decades since 1967. He also explores the darker side of the 737's history, laying bare the politics, power-struggles, changes of management ideology and battles with Airbus that culminated in the 737 MAX debacle that has threatened Boeing's very survival.

Flying Blind

The 737 MAX Tragedy and the Fall of Boeing

Penguin UK 'A startling investigation of the corporate blunders behind the tragedies that claimed the lives of 346 passengers.' - The Times 'A compelling, deeply reported account written in crisp, controlled anger...an indictment not just of one of America's most celebrated companies, but of an entire era.' - Financial Times 'An authoritative, gripping and finely detailed narrative that charts the decline of one of the great American companies.' - New York Times Book Review ----- Discover the corporate scandal that transfixed the world, cost hundreds of innocent lives, and almost destroyed a global institution. Boeing is a century-old titan of industry, having played a role in the early days of commercial flight, Second World War bombing missions and even moon landings. Yet in 2018 and 2019, two crashes of the Boeing 737 MAX 8 killed 346 people. The crashes exposed a shocking pattern of malfeasance, leading to the biggest crisis in the company's history - and one of the costliest corporate scandals ever. How did things go so horribly wrong? Flying Blind is the definitive account of the disasters that shocked the world; a chilling, behind-the-scenes look at the corporate dysfunction which contributed to one of the worst tragedies in modern aviation. It's an exposé of a reckless culture where - in a race to beat the competition and reward top executives - Boeing skimped on testing, pressured employees to meet unrealistic deadlines and ultimately convinced regulators to put planes into the air

without properly equipping them or their pilots for flight. From award-winning Bloomberg investigative journalist Peter Robison, this is the story of a business gone wildly off course. At once endlessly fascinating and deeply disturbing, it shows how the iconic company fell prey to a win-at-all-costs mentality, threatening an industry and sacrificing countless lives. ----
 ---- 'An urgent, compelling and richly reported story of how the almighty profit motive supplanted a culture of engineering excellence, and the avoidable calamity that has impacted all of us as a result.' - Brad Stone, author of Amazon Unbound and The Everything Store 'A story everyone - every consumer, every citizen, every worker in every industry - needs to read.' - Diana B. Henriques, NYT bestselling author of The Death of Trust and The Wizard of Lies: Bernie Madoff 'The astoundingly well reported and beautifully told story of the downfall of what was once a great American company. A must-read.' - Bethany McClean, author of All The Devils Are Here and The Smartest Guys In The Room

AIR CRASH INVESTIGATIONS: JAMMED RUDDER KILLS 132, The Crash of USAir Flight 427

Lulu.com The Boeing 737 has a history of rudder system-related anomalies, including numerous instances of jamming. A number of accidents and incidents were the result of the airplanes' unexpected movement of their rudders. During the course of the four and a half year investigation of the crash of USAir Flight 427 near Aliquippa, Pennsylvania, killing 132 people, the NTSB discovered that the PCU's dual servo valve could jam as well as deflect the rudder in the opposite direction of the pilots' input, due to thermal shock, caused when cold PCUs are injected with hot hydraulic fluid. This finally solved the mystery of sudden jamming of the rudders of this aircraft.

AIR CRASH INVESTIGATIONS - THE BOEING 737 MAX DISASTER PART II -The Crash of Ethiopian Airlines Flight 302

Lulu Press, Inc On March 10, 2019, at 05:38 UTC, Ethiopian Airlines flight 302, Boeing 737-8 (MAX), ET-AVJ, took off as a scheduled international flight, from Addis Ababa Bole International Airport bound to Nairobi, Kenya. It departed Addis Ababa with 157 persons on board: 2 flight crew (a Captain and a First Officer), 5 cabin crew and one IFSO, 149 regular passengers. The take-off roll and lift-off was normal, including normal values of left and right angle-of-attack (AOA). Shortly after liftoff, the left Angle of Attack sensor recorded value became erroneous and the left stick shaker activated and remained active until near the end of the recording. In addition, the airspeed and altitude values from the left air data system began deviating from the corresponding right side values. The left and right recorded AOA values began deviating. At 5:40:22, the second automatic nose-down trim activated. Following nose-down trim activation GPWS DON'T SINK sounded for 3 seconds and "PULL UP" also displayed on PFD for 3 seconds. The Captain was unable to maintain the flight path and requested to return back to the departure airport. At 05:43:21, an automatic nose-down trim activated for about 5 s. The stabilizer moved from 2.3 to 1 unit. The rate of climb decreased followed by a descent in 3 s after the automatic trim activation. The descent rate and the airspeed continued increasing. Computed airspeed values reached 500kt, pitch and descent rate values were greater than 33,000 ft/min. Finally; both recorders stopped recording at around 05: 44 the Aircraft impacted terrain 28 NM South East of Addis Ababa near Ejere. All 157 persons on board: 2 flight crew, 5 cabin crew and one IFSO, and 149 regular passengers were fatally injured. The crash of Ethiopian Airlines Flight 302 was, after the crash of Lion Air Flight 610 on October 29, 2018, the second crash of a Boeing 737 MAX 8 within a period of 4 months.

Flight Failure

Investigating the Nuts and Bolts of Air Disasters and Aviation Safety

Rowman & Littlefield A former aircraft engineer exposes the dangerous breakdown in airline safety due to lapses in maintenance and quality control. This book chronicles maintenance-related accidents caused by individual, corporate, or governmental negligence and brings the industry's current state of affairs into sharp focus. The author, a former aviation engineer specializing in aircraft fault diagnosis and maintenance planning, examines how failures of the smallest of parts have brought down airliners, explaining sometimes esoteric mechanical issues for readers with no technical background. Vividly describing the terror of accidents and close calls, the author then follows the painstaking investigations to determine causes. He focuses on maintenance errors, which rank as one of the top three causes of airline accidents, and points to the factors that have led to an alarming situation-- continued reduction of licensed mechanics, the shutting down of maintenance bases in the United States, and the outsourcing of maintenance to lowballing contractors. Outsourcing has forced thousands of licensed mechanics into retirement or different careers. For those mechanics still employed in the United States, the ever-present threat to their jobs does nothing to cultivate loyalty to an employer and devotion to a task. The Federal Aviation Administration, which should be overseeing quality control, is caught in a conflicted dual role--charged with regulating safety on the one hand and assuring the fiscal stability of airlines on the other. This disturbing wakeup call for improved airline safety standards highlights the critical importance of attention to detail. Porter recommends that the numbers and job security of airline mechanics be increased and that they be vested with an authority level akin to medical professionals.

The Airliner Cabin Environment and the Health of Passengers and Crew

National Academies Press Although poor air quality is probably not the hazard that is foremost in peoples' minds as they board planes, it has been a concern for years. Passengers have complained about dry eyes, sore throat, dizziness, headaches, and other symptoms. Flight attendants have repeatedly raised questions about the safety of the air that they breathe. The Airliner Cabin Environment and the Health of Passengers and Crew

examines in detail the aircraft environmental control systems, the sources of chemical and biological contaminants in aircraft cabins, and the toxicity and health effects associated with these contaminants. The book provides some recommendations for potential approaches for improving cabin air quality and a surveillance and research program.

Human Error in Aviation

Routledge Most aviation accidents are attributed to human error, pilot error especially. Human error also greatly effects productivity and profitability. In his overview of this collection of papers, the editor points out that these facts are often misinterpreted as evidence of deficiency on the part of operators involved in accidents. Human factors research reveals a more accurate and useful perspective: The errors made by skilled human operators - such as pilots, controllers, and mechanics - are not root causes but symptoms of the way industry operates. The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient.

The Man Who Broke Capitalism

How Jack Welch Gutted the Heartland and Crushed the Soul of Corporate America—and How to Undo His Legacy

Simon and Schuster New York Times Bestseller New York Times reporter and “Corner Office” columnist David Gelles reveals legendary GE CEO Jack Welch to be the root of all that’s wrong with capitalism today and offers advice on how we might right those wrongs. In 1981, Jack Welch took over General Electric and quickly rose to fame as the first celebrity CEO. He golfed with presidents, mingled with movie stars, and was idolized for growing GE into the most valuable company in the world. But Welch’s achievements didn’t stem from some greater intelligence or business prowess. Rather, they were the result of a sustained effort to push GE’s stock price ever higher, often at the expense of workers, consumers, and innovation. In this captivating, revelatory book, David Gelles argues that Welch single-handedly ushered in a new, cutthroat era of American capitalism that continues to this day. Gelles chronicles Welch’s campaign to vaporize hundreds of thousands of jobs in a bid to boost profits, eviscerating the country’s manufacturing base and destabilizing the middle class. Welch’s obsession with downsizing—he eliminated 10% of employees every year—fundamentally altered GE and inspired generations of imitators who have employed his strategies at other companies around the globe. In his day, Welch was corporate America’s leading proponent of mergers and acquisitions, using deals to gobble up competitors and giving rise to an economy that is more concentrated and less dynamic. And Welch pioneered the dark arts of “financialization,” transforming GE from an admired industrial manufacturer into what was effectively an unregulated bank. The finance business was hugely profitable in the short term and helped Welch keep GE’s stock price ticking up. But ultimately, financialization

undermined GE and dozens of other Fortune 500 companies. Gelles shows how Welch's celebrated emphasis on increasing shareholder value by any means necessary (layoffs, outsourcing, offshoring, acquisitions, and buybacks, to name but a few tactics) became the norm in American business generally. He demonstrates how that approach has led to the greatest socioeconomic inequality since the Great Depression and harmed many of the very companies that have embraced it. And he shows how a generation of Welch acolytes radically transformed companies like Boeing, Home Depot, Kraft Heinz, and more. Finally, Gelles chronicles the change that is now afoot in corporate America, highlighting companies and leaders who have abandoned Welchism and are proving that it is still possible to excel in the business world without destroying livelihoods, gutting communities, and spurning regulation.

AIR CRASH INVESTIGATIONS, CAPTAIN LOST CONTROL The Crash of Kenya Airways Flight 507

Lulu.com During the night of 04th May 2007, the B737-800, registration 5Y-KYA, operated by Kenya Airways as flight KQA 507 from Abidjan international airport (Cote d'Ivoire), to the Jomo Kenyatta airport Nairobi (Kenya), made a scheduled stop-over at the Douala international airport (Cameroon). The weather was stormy. A number of departing planes decided to wait for the weather to improve. Kenya Airways, however, decided to depart. Shortly after take-off at about 1000 ft, the aircraft entered into a slow right roll that increased continuously and eventually ended up in a spiral dive. On the 5th May 2007 at approximately 0008 hrs, the airplane crashed in a mangrove swamp South-South/East of Douala. All 114 people on board were killed and the airplane was completely destroyed. The airplane crashed after loss of control by the crew as a result of spatial disorientation, after a long slow roll, during which no instrument scanning was done, and in the absence of external visual references in a dark night.
