## The Handbook of International Humanitarian Law

Oxford University Press This is the third edition of this influential and comprehensive handbook. Substantive changes in international humanitarian law have taken place recently, including a progressive development of customary law; and the jurisprudence of national courts, international ad hoc tribunals and the International Criminal Court, which have made a reassessment of this vitally important part of international law both timely and topical. New material is extensively incorporated, including new developments in treaty law, such as the 2010 amendments to the ICC Statute, as well as new topics that have been extensively debated in recent years: direct participation in hostilities; air and missile warfare; belligerent occupation; operational detention; and the protection of the environment in armed

conflict. The growing need to consider borderline issues of the law of armed conflict and the interplay of international humanitarian law, human rights, and other branches of international law have led to have led to some material being considered in a new light. The commentary both deepens reflection on such innovations, and critically reconsiders views expressed in earlier editions to provide a contemporary analysis of this changing field. Renowned international lawyers offer a broad spectrum of legal opinions, restating the law in this area, which is applicable worldwide. Issues of human rights in armed conflicts and in post-conflict situations are extensively addressed. Controversial opinions and national and international judgments are documented and discussed. Problems of application of the law in recent military campaigns are assessed and interpreted in a practice-oriented manner. Based on best-practice rules of global importance, this book also sets out an international 'manual' for international humanitarian law in armed conflicts.

## Handbook on Securities Statistics

International Monetary Fund The production of the Handbook on Securities Statistics (the Handbook) is a joint undertaking by the Bank for International Settlements (BIS), the European Central Bank (ECB) and the International Monetary Fund (IMF). They have specific interests and expertise in the area of securities statistics and are the core members of the Working Group on Securities Databases (WGSD). In 2007, the WGSD—originally established by the IMF in 1999—was reconvened in response to various international initiatives and recommendations to improve information on securities markets. The WGSD is chaired by the ECB and includes the BIS, the IMF and the World Bank. Selected experts from national central banks, who participated actively in the various international groups that identified the need to improve data on securities markets, were also invited to contribute to some of the WGSD's deliberations. In mid-2008, the WGSD agreed to sponsor the development of a handbook on securities statistics. In November 2009, the report entitled "The Financial Crisis and Information Gaps", which was prepared by the Financial Stability Board (FSB) Secretariat and IMF staff at the request of the Group of Twenty (G-20) finance ministers and central bank governors, endorsed the development of the Handbook, as well as the gradual implementation of improved statistics on issuance and holdings of

securities at the national and international level. The BIS's compilation of data on debt securities plays an important role in this respect. The Handbook sponsors responded to the demand from various international groups for the development of methodological standards for securities statistics and released the Handbook in three parts. Part 1 on debt securities issues was published in May 2009, and Part 2 on debt securities holdings in September 2010. Part 3 of the Handbook on equity securities statistics was published in November 2012. The methodology described in all three parts was based on the System of National Accounts 2008 (2008 SNA) and the sixth edition of the Balance of Payments and International Investment Position Manual (BPM6). The three parts also went slightly beyond the confines of these standards by providing guidance and additional information on, for example, the main features of securities, special and borderline cases, and breakdowns of issues and holdings of securities by counterparty. Special attention was also paid to specific operations such as mergers and acquisitions, restructuring, privatization and nationalization, and transactions between general government and public corporations. From the beginning, the intention was to combine the three parts into one volume, thereby eliminating any overlap and repetitions between the parts. The Handbook's conceptual framework is complemented by a set of tables for presenting securities data both at an aggregated level and broken down by various features. This should allow sufficient flexibility in the presentation of data on issuance and holdings of securities, in line with developments in securities markets and financing. The Handbook is the first publication of its kind to focus exclusively on securities statistics. Recent turmoil in global financial markets has confirmed the importance of timely, relevant, coherent, and internationally comparable data on securities, from the perspective of monetary policy, fiscal policy, and financial stability analysis. This Handbook provides a conceptual framework for the compilation and presentation of statistics on different types.

## Polymer Data Handbook

Oxford University Press, USA This new edition includes better values of properties already reported, properties not reported in time for the earlier edition, and entirely new properties becoming important for modern polymer applications. It also contains 217 total polymers, 20 of which are all-new, particularly in high-technology areas such as electrical conductivity, non-linear optical properties, microlithography, nanophotonics, and electroluminescences. Examples of specific polymers include silsesquoxane ladder polymers, 'foldamer' self-assembling polymers, and block copolymers that phase separate into 'mushrooms', ellipsoids, and sheets with on surface radically different in properties from the other.
