If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time. **Seloc Yamaha 4-stroke Outboards 2005-10 Repair Manual 2.5-350 HP, 1-4 Cylinder, V6 & V8 Models Seloc Publications** "Covers all 2.5-350 HP, 1-4 cylinder, V6 and V8 4-stroke models. Faecal Sludge Management Systems Approach for Implementation and Operation IWA Publishing It is estimated that literally billions of residents in urban and peri-urban areas of Africa, Asia, and Latin America are served by onsite sanitation systems (e.g. various types of latrines and septic tanks). Until recently, the management of faecal sludge from these onsite systems has been grossly neglected, partially as a result of them being considered temporary solutions until sewer-based systems could be implemented. However, the perception of onsite or decentralized sanitation technologies for urban areas is gradually changing, and is increasingly being considered as long-term, sustainable options in urban areas, especially in low- and middle-income countries that lack sewer infrastructures. This is the first book dedicated to faecal sludge management. It compiles the current state of knowledge of the rapidly evolving field of faecal sludge management, and presents an integrated approach that includes technology, management, and planning based on Sandecs 20 years of experience in the field. Faecal Sludge Management: Systems Approach for Implementation and Operation addresses the organization of the entire faecal sludge management service chain, from the collection and transport of sludge, and the current state of knowledge of treatment options, to the final end use or disposal of treated sludge. The book also presents important factors to consider when evaluating and upscaling new treatment technology options. The book is designed for undergraduate and graduate students, and engineers and practitioners in the field who have some basic knowledge of environmental and/or wastewater engineering. Small Wars Manual Can Music Make You Sick? Measuring the Price of Musical Ambition University of Westminster Press "Musicians often pay a high price for sharing their art with us. Underneath the glow of success can often lie loneliness and exhaustion, not to mention the basic struggles of paying the rent or buying food. Sally Anne Gross and George Musgrave raise important questions - and we need to listen to what the musicians have to tell us about their working conditions and their mental health." Emma Warren (Music Journalist and Author). "Singing is crying for grown-ups. To create great songs or play them with meaning music's creators reach far into emotion and fragility seeking the communion we demand of it. However, music's toll on musicians can leave deep scars. In this important book, Sally Anne Gross and George Musgrave investigate the relationship between the wellbeing music brings to society and the wellbeing of those who create. It's a much needed reality check, deglamorising the romantic image of the tortured artist." Crispin Hunt (Multi-Platinum Songwriter/Record Producer, Chair of the Ivors Academy). It is often assumed that creative people are prone to psychological instability, and that this explains apparent associations between cultural production and mental health problems. In their detailed study of recording and performing artists in the British music industry, Sally Anne Gross and George Musgrave turn this view on its head. By listening to how musicians understand and experience their working lives, this book proposes that whilst making music is therapeutic, making a career from music can be traumatic. The authors show how careers based on an all-consuming passion have become more insecure and devalued. Artistic merit and intimate, often painful, self-disclosures are the subject of unremitting scrutiny and data metrics. Personal relationships and social support networks are increasingly bound up with calculative transactions. Drawing on original empirical research and a wide-ranging survey of scholarship from across the social sciences, their findings will be provocative for future research on mental health, wellbeing and working conditions in the music industries and across the creative economy. Going beyond self-help strategies, they challenge the industry to make transformative structural change. Until then, the book provides an invaluable guide for anyone currently making their career in music, as well as those tasked with training and educating the next generation. Health System Efficiency How to Make Measurement Matter for Policy and Management Health Policy In this book the authors explore the state of the art on efficiency measurement in health systems and international experts offer insights into the pitfalls and potential associated with various measurement techniques. The authors show that: - The core idea of efficiency is easy to understand in principle - maximizing valued outputs relative to inputs, but is often difficult to make operational in real-life situations - There have been numerous advances in data collection and availability, as well as innovative methodological approaches that give

valuable insights into how efficiently health care is delivered - Our simple analytical framework can facilitate the development and interpretation of efficiency indicators. Increasingly, the decisions that affect our lives - where we go to school, whether we get a loan, how much we pay for insurance - are being made not by humans, but by mathematical models. In theory, this should lead to greater fairness: everyone is judged according to the same rules, and bias is eliminated. And yet, as Cathy O'Neil reveals in this urgent and necessary book, the opposite is true. The models being used today are opaque, unregulated, and incontestable, even when they're wrong. Most troubling, they reinforce discrimination. Tracing the arc of a person's life, O'Neil exposes the black box models that shape our future, both as individuals and as a society. These "weapons of math destruction" score teachers and students, sort CVs, grant or deny loans, evaluate workers, target voters, and monitor our health. O'Neil calls on modellers to take more responsibility for their algorithms and on policy makers to regulate their use. But in the end, it's up to us to become more savvy about the models that govern our lives. This important book empowers us to ask the tough questions, uncover the truth, and demand change. Building a Special with Ant Anstead Master Mechanic Following the Build of Ant's Own Classic F1 Single-Seater Special Haynes Manuals Ant Anstead's Building a Special brings the Haynes story full circle, coming 61 years after the original Building a 750 Special was written by John Haynes, Haynes Publishing's founder, when he was still a schoolboy. This book is a TV tie-in, following the 12-part TV series Ant Anstead Master Mechanic, aired on Motor Trend, part of the Discover Network in the US and UK, following Ant Anstead's build of his own-design 'special' car, taking inspiration from the Alfa 158 - the first World Championship-winning F1 car, which raced from the 1930s until the 1950s. The 12-part TV series followed Ant's build of the car, from the first design ideas, through the construction, culminating in the debut of the car during the 2019 US Grand Prix weekend in Austin, Texas. The book follows Ant's personal build of the car, from the selection of the donor MG TD for the chassis, and Alfa Romeo Spider for the engine and gearbox, through modifying the chassis, building the suspension, steering, brakes, bodywork and interior, and putting all the components together to produce a finished one-off 'special.' Content includes: Introduction The history of specials Planning Donor car Chassis, suspension, steering, rear axle Engine, fuel system, cooling system, ancillaries, exhaust Gearbox Bodywork Braking system Cockpit Wiring Preparation and painting Testing Setting up and Making road legal.
