ENVIRONMENTAL CRIME IN TRANSNATIONAL CONTEXT

GLOBAL ISSUES IN GREEN ENFORCEMENT AND CRIMINOLOGY

Routledge Environmental crime is one of the most profitable and fastest growing areas of international criminal activity. The increasing cross-border scope of environmental crimes and harms is one of the reasons why governments and the enforcement community have trouble in finding the proper responses. Law enforcement cooperation between western industrialized states is often time consuming and problematic, and the problems increase exponentially when environmental criminals take advantage of situations where government and law enforcement are weak. This book provides an overview of the developments and problems in the field of transnational environmental crimes and harms, addressing these issues from perspectives such as enforcement, deterrence, compliance and emission trading schemes. Divided into four parts, the authors consider global issues in green criminology, responses to transnational environmental crimes and harms, alternative methods to combat environmental crime, and specific types of crimes and criminological research. Discussing these topics from the view of green criminology, sociology and governance, this book will be of great interest to all those concerned about the transnational dimensions of crime and the environment.

LOW-TECH MAGAZINE 2012-2018

Kris De Decker Low-tech Magazine underscores the potential of past and often forgotten technologies and how they can inform sustainable energy practices. Sometimes, past technologies can be copied without any changes. More often, interesting possibilities arise when older technology is combined with new knowledge and new materials, or when past concepts and traditional knowledge are applied to modern technology. Inspiration is also to be found in the so-called "developing" world, where resource constraints often lead to inventive, low-tech solutions.

CYBERCRIME THROUGH AN INTERDISCIPLINARY LENS

Taylor & Francis Research on cybercrime has been largely bifurcated, with social science and computer science researchers working with different research agendas. These fields have produced parallel scholarship to understand cybercrime offending and victimization, as well as techniques to harden systems from compromise and understand the tools used by cybercriminals. The literature developed from these two fields is diverse and informative, but until now there has been minimal interdisciplinary scholarship combining their insights in order to create a more informed and robust body of knowledge. This book offers an interdisciplinary approach to research on cybercrime and lays out frameworks for collaboration between the fields. Bringing together international experts, this book explores a range of issues from malicious software and hacking to victimization and fraud. This work also provides direction for policy changes to both cybersecurity and criminal justice practice based on the enhanced understanding of cybercrime that can be derived from integrated research from both the technical and social sciences. The authors demonstrate the breadth of contemporary scholarship as well as identifying key questions that could be addressed in the future or unique methods that could benefit the wider research community. This edited collection will be key reading for academics, researchers, and practitioners in both computer security and law enforcement. This book is also a comprehensive resource for postgraduate and advanced undergraduate students undertaking courses in social and technical studies.

ROBOTICS IN STEM EDUCATION

HATERS

HARASSMENT, ABUSE, AND VIOLENCE ONLINE

U of Nebraska Press Cybersexism is rampant and can exact an astonishingly high cost. In some cases, the final result is suicide.

Bullying, stalking, and trolling are just the beginning. Extreme examples such as GamerGate get publicized, but otherwise the online abuse of women is largely underreported. Haters combines a history of online sexism with suggestions for solutions. Using current events and the latest available research into cybersexism, Bailey Poland questions the motivations behind cybersexist activities and explores methods to reduce footprints of Internet misogyny, drawing parallels between online and offline abuse. By exploring the cases of Alyssa Funke, Rehtaeh Parsons, Audrie Pott, Zoe Quinn, Anita Sarkeesian, Brianna Wu, and others, and her personal experiences with sexism, Poland develops a compelling method of combating sexism online.
