In pieces that appeared in *The New Yorker* and were anthologized in *Best American Essays*, Antrim explored his intense and complicated relationships with his mother, Louanne, an artist and teacher who was, at her worst, a ferociously destabilized and destabilizing alcoholic; his gentle grandfather, who lived in the mountains of North Carolina and who always hoped to save his daughter from herself; and his father, who married Louanne twice. *The Afterlife* is not a temporally linear coming-of-age memoir; instead, Antrim follows a logic of unconscious life, of dreams and memories, of fantasies and psychoses, the way in which the world of the alcoholic becomes a sleepless, atemporal world. In it, he comes to terms with—and fails to comes to terms with—the nature of addiction and the broken states of loneliness, shame, and loss that remain beyond his power to fully repair. This is a tender and even blackly hilarious portrait of a family—faulty, cracked, enraging. It is also the story of the way the author works, in part through writing this book, to become a man more fully alive to himself and to others, a man capable of a life in which he may never learn, or ever hope to know, the nature of his origins. **Alcohol in America Taking Action to Prevent Abuse** National Academies Press Alcohol is a killer--1 of every 13 deaths in the United States is alcohol-related. In addition, 5 percent of the population consumes 50 percent of the alcohol. [T]his is one book that addresses solutions. . . . And it's enjoyably readable. . . . This is an excellent review for anyone in the alcoholism prevention business, and good background reading for the interested layperson." *The Washington Post* agrees: the book ". . . likely will wind up on the bookshelves of counselors, politicians, judges, medical professionals, and law enforcement officials throughout the country." **Improving and Reforming the Nation's Surface Transportation Programs Hearing Before the Subcommittee on Highways and Transit of the Committee on Transportation and Infrastructure, House of Representatives, One Hundred Twelfth Congress, First Session, March 29 and 30, 2011** [EngLits-A Tale of Two Cities \(pdf\)](#) [InterLingua Publishing](#) Detailed summaries of great literature. **The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of Patients With Alcohol Use Disorder** [American Psychiatric Pub](#) Alcohol use disorder (AUD) is a major public health problem in the United States. The estimated 12-month and lifetime prevalence values for AUD are 13.9% and 29.1%, respectively, with approximately half of individuals with lifetime AUD having a severe disorder. AUD and its sequelae also account for significant excess mortality and cost the United States more than \$200 billion annually. Despite its high prevalence and numerous negative consequences, AUD remains undertreated. In fact, fewer than 1 in 10 individuals in the United States with a 12-month diagnosis of AUD receive any treatment. Nevertheless, effective and evidence-based interventions are available, and treatment is associated with reductions in the risk of relapse and AUD-associated mortality. The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of Patients With Alcohol Use Disorder seeks to reduce these substantial psychosocial and public health consequences of AUD for millions of affected individuals. The guideline focuses specifically on evidence-based pharmacological treatments for AUD in outpatient settings and includes additional information on assessment and treatment planning, which are an integral part of using pharmacotherapy to treat AUD. In addition to reviewing the available evidence on the use of AUD pharmacotherapy, the guideline offers clear, concise, and actionable recommendation statements, each of which is given a rating that reflects the level of confidence that potential benefits of an intervention outweigh potential harms. The guideline provides guidance on implementing these recommendations into clinical practice, with the goal of improving quality of care and treatment outcomes of AUD. **Life After Life The global bestseller, now a major BBC series** [Random House](#) The PRIZE-WINNING BESTSELLER, now a major BBC1 DRAMA SERIES starring Thomasin McKenzie, Sian Clifford and James McArdle, directed by BAFTA award-winning John Crowley. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application.

Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators. **Facing Addiction in America The Surgeon General's Report on Alcohol, Drugs, and Health** [Createspace Independent Publishing Platform](#) All across the United States, individuals, families, communities, and health care systems are struggling to cope with substance use, misuse, and substance use disorders. Substance misuse and substance use disorders have devastating effects, disrupt the future plans of too many young people, and all too often, end lives prematurely and tragically. Substance misuse is a major public health challenge and a priority for our nation to address. The effects of substance use are cumulative and costly for our society, placing burdens on workplaces, the health care system, families, states, and communities. The Report discusses opportunities to bring substance use disorder treatment and mainstream health care systems into alignment so that they can address a person's overall health, rather than a substance misuse or a physical health condition alone or in isolation. It also provides suggestions and recommendations for action that everyone-individuals, families, community leaders, law enforcement, health care professionals, policymakers, and researchers-can take to prevent substance misuse and reduce its consequences. **Water Governance** [Allied Publishers](#) This present volume contains 18 contributions, papers presented in four technical sessions during the national seminar on Governance and Management of water. The book draws on general pharmacology, neuropharmacology, and alcohol studies to explore its theme. The second volume in the ALCOHOL AND ALCOHOLISM series, it focuses on the pharmacologic mechanisms underlying the development of alcoholism. The first section on basic pharmacology is concerned with those aspects that are common to all of alcohol's effects. These include pharmacokinetics, general metabolism, and cross-tolerance. The second section on neuropharmacology describes the effects of alcohol on various brain functions, including circulation and metabolism. The third section provides an in-depth review of the neurobiology of physical dependence, withdrawal, and physiological tolerance. The book as a whole gives a comprehensive and authoritative picture of the complex pharmacologic actions of alcohol, particularly on the nervous system. For clinicians and researchers in the field of alcohol and alcoholism, it will serve as a fundamental reference. **Alcohol and Public Health in the Americas A Case for Action** [World Health Organization](#) The purpose of this book is to explain the need for making alcohol a top public health priority in the region and thence for national and regional action. Current evidencebased research shows that alcohol consumption and drinking patterns in the Americas are at damaging levels, with the region surpassing global averages for many alcohol related problems. Extensive research has demonstrated the effectiveness of numerous public health policies which have been evaluated in different countries and cultures **Light in Forensic Science Issues and Applications** [Royal Society of Chemistry](#) The identification and quantification of material present and collected at a crime scene are critical requirements in investigative analyses. Forensic analysts use a variety of tools and techniques to achieve this, many of which use light. Light is not always the forensic analyst's friend however, as light can degrade samples and alter results. This book details the analysis of a range of molecular systems by light-based techniques relevant to forensic science, as well as the negative effects of light in the degradation of forensic evidence, such as the breakage of DNA linkages during DNA profiling. The introductory chapters explain how chemiluminescence and fluorescence can be used to visualise samples and the advantages and limitations of available technologies. They also discuss the limitations of our knowledge about how light could alter the physical nature of materials, for example by breaking DNA linkages during DNA profiling or by modifying molecular structures of polymers and illicit drugs. The book then explains how to detect, analyse and interpret evidence from materials such as illicit drugs, agents of bioterrorism, and textiles, using light-based techniques from microscopy to surface enhanced Raman spectroscopy. Edited by active photobiological and forensic scientists, this book will be of interest to students and researchers in the fields of photochemistry, photobiology, toxicology and forensic science. **The 12-Step Buddhist Enhance Recovery from Any Addiction** [Simon and Schuster](#) The face of addiction and alcoholism is a face that many have seen before -- it may be a celebrity, a colleague, or even a family member. And though the 12-step program by itself can often bring initial success, many addicts find themselves relapsing back into old ways and old patterns, or replacing one addiction with another. Author Darren Littlejohn has been there and back, and presents a complimentary guide for recovery to the traditional twelve-step program, out of his own struggles and successes through the study of Zen and Tibetan Buddhism. Working with the traditional 12-Step philosophy, the author first shares his own life path, and how he came to find the spiritual solace that has greatly enhanced his life in recovery. Then, he details out how his work integrating Buddhism into the traditional twelve-step programs validates both aspects of the recovery process. While being careful not to present himself as a Tibetan lama or Zen master, the author shows how each step -- such as admitting there is a problem, seeking help, engaging in a thorough self-examination, making amends for harm done, and helping other drug addicts who want to recover -- fits into the Bodhisattva path. This integration makes Buddhism accessible for addicts, and the 12 Steps understandable for Buddhists who may otherwise be at a loss to help those in need. The 12-Step Buddhist is designed to be a complimentary practice to the traditional 12-step journey, not a replacement. While traditional twelve-step programs help addicts become sober by removing the drug of choice and providing a spiritual path, they rarely delve deep into what causes people to suffer in the first place. The integration of Buddhism with the traditional process provides the wisdom and meditations that can help addicts truly find a deep, spiritual liberation from all causes and conditions of suffering -- for good. **The Report of the Hillsborough Independent Panel** [The Stationery Office](#) 96 women, men and children died as a result of the disaster in Hillsborough Stadium on 15 April 1989. They were crushed due to overcrowding in the Leppings Lane terrace, penned in by the ground's fencing. Hundreds more were injured and thousands traumatised. Lord Justice Taylor led a judicial inquiry (1990, Cm. 962, ISBN 9780101096225), concluding that the main cause of the disaster was the failure of police control. The next 11 years saw a variety of investigations and proceedings, including a scrutiny of new evidence (Lord Justice Stuart-Smith, 1998, Cm. 3878, ISBN 9780101387828). Yet many bereaved families felt that the true context, circumstances and aftermath had not been adequately made public, and were particularly aggrieved that it had become widely assumed that Liverpool fans' behaviour had contributed to the disaster. The Independent Panel was established in 2010 to oversee full public disclosure of all documents relating to the disaster and to report on its work. This report is in three parts. Firstly it shows what was already known and in the public domain by 2010. Secondly, in 12 detailed chapters, it describes what the disclosed documents add to public understanding. The third part gives a review of options for providing an archive of the documents. The disclosed documents (available at <http://panel.hillsborough.independent.gov.uk/>) add considerably to public understanding. They show that multiple factors were responsible for the tragedy and that the fans were not the cause. The report also shows that the bereaved families met a series of obstacles in their search for justice over more than 20 years. **Caffeine for the Sustainment of Mental Task Performance Formulations for Military Operations** [National Academies Press](#) This report from the Committee on Military Nutrition Research reviews the history of caffeine usage, the metabolism of caffeine, and its physiological effects. The effects of caffeine on physical performance, cognitive function and alertness, and alleviation of sleep deprivation impairments are discussed in light of recent scientific literature. The impact of caffeine consumption on various aspects of health, including cardiovascular disease, reproduction, bone mineral density, and fluid homeostasis are reviewed. The behavioral effects of caffeine are also discussed, including the effect of caffeine on reaction to stress, withdrawal effects, and detrimental effects of high intakes. The amounts of caffeine found to enhance vigilance and reaction time consistently are reviewed and recommendations are made with respect to amounts of caffeine appropriate for maintaining alertness of military personnel during field operations. Recommendations are also provided on the need for appropriate labeling of caffeine-containing supplements, and education of military personnel on the use of these supplements. A brief review of some alternatives to caffeine is also provided. **Staying Alive While Living the Life Adversity, Strength, and Resilience in the Lives of Homeless Youth** [Fernwood Publishing](#) In *Staying Alive While Living the Life*, Sue-Ann MacDonald and Benjamin Roebuck unpack the realities of living on the streets from the perspective of homeless youth. While much is written about at-risk youth, most literature on youth homelessness reduces their lives to flattened images with little room for the diverse, complex and individual nature of their experiences. Challenging the dominant youth-at-risk conversation by putting forward a framework of survival and resilience, MacDonald and Roebuck illustrate the ways that young people who experience homelessness demonstrate tremendous resilience when facing adversity, social exclusion and various forms of oppression. Drawing on conversations with homeless youth, this book focuses both on the external constraints imposed on their lives as well as the ways young people understand their circumstances and their approaches to problem solving. The result is a nuanced analysis that puts human agency at its centre, allowing readers to explore the challenges young people face and the internal and external resources they draw upon when making decisions about their lives. **High Quality Care for All NHS Next Stage Review Final Report** [The Stationery Office](#) This review incorporates the views and visions of 2,000 clinicians and other health and social care professionals from every NHS region in England, and has been developed in discussion with patients, carers and the general public. The changes proposed are locally-led, patient-centred and clinically driven. Chapter 2 identifies the challenges facing the NHS in the 21st century: ever higher expectations; demand driven by demographics as people live longer; health in an age of information and connectivity; the changing nature of disease; advances in treatment; a changing health workplace. Chapter 3 outlines the proposals to deliver high quality care for patients and the public, with an emphasis on helping people to stay healthy, empowering patients, providing the most effective treatments, and keeping patients as safe as possible in healthcare environments. The importance of quality in all aspects of the NHS is reinforced in chapter 4, and must be understood from the perspective of the patient's safety, experience in care received and the effectiveness of that care. Best practice will be widely promoted, with a central role for the National Institute for Health and Clinical Excellence (NICE) in expanding national standards. This will bring clarity to the high standards expected and quality performance will be measured and published. The review outlines the need to put frontline staff in control of this drive for quality (chapter 5), with greater freedom to use their expertise and skill and decision-making to find innovative ways to improve care for patients. Clinical and managerial leadership skills at the local level need further development, and all levels of staff will receive support through education and training (chapter 6). The review recommends the introduction of an NHS Constitution (chapter 7). The final chapter sets out the means of implementation. **The Applied Economics of Transport** [Routledge](#) This book provides an introduction and overview to nine applied financial studies on the theme of transport. The studies cover a wide range of topics, from value based trading of real assets in shipping, to the determinants of efficiency and productivity in European railways, to the market for used cars. The studies employ a variety of applied techniques across a range of countries, analysing a range of different modes of transport. This book was originally published as a special issue of *Applied Economics*. **Global Strategy to Reduce the Harmful Use of Alcohol** Every year, the harmful use of alcohol kills 2.5 million people, including 320,000 young people between 15 and 29 years of age. It is the eighth leading risk factor for deaths globally, and harmful use of alcohol was responsible for almost 4% of all deaths in the world, according to the estimates for 2004. In addition to the resolution, a global strategy developed by WHO in close collaboration with Member States provides a portfolio of policy options and interventions for implementation at the national level with the goal to reduce the harmful use of alcohol worldwide. Ten recommended target areas for policy options include health services' responses, community action, pricing policies and reducing the public health impact of illicit alcohol and informally produced alcohol. WHO was also requested to support countries in implementing the strategy and monitor progress at global, regional and national levels. **Preventing Bipolar Relapse A Lifestyle Program to Help You Maintain a Balanced Mood and Live Well** [New Harbinger Publications](#) If you buy just one book on bipolar disorder, let this be it. It examines psychoactive drug screening and the use of driving simulators to evaluate skills impairment after drinking alcoholic beverages. Portable electronic digital screening devices such as "Oral Screen," along with other screening devices were used to establish the prevalence of substances of abuse among road users in some selected cities in Nigeria. Blood, saliva, urine, and other biological fluids were screened. Skills impairment, characterized by unsafe driving actions based on the level of blood alcohol concentration (BAC), was evaluated using a driving simulator. The findings were validated by application of a Field Impairment Test (FIT) or modified clinical test of impairment. The implication of the results on everyday highway utilization and the best approach for research into screening for psychoactive drugs are highlighted, along with several recommendations to enhance highway safety. **Framework for Alcohol Policy in the WHO European Region** World Health Organization Europe has the highest per capita alcohol consumption rate of any WHO region, as well as a disease burden from alcohol which is twice the world average. This publication sets out a policy framework for action to combat alcohol-related problems at local national and regional levels. Issues discussed include: key principles and objectives of the framework, current initiatives and emerging challenges, key players and their roles, regional, national and local instruments and action plans, key tools for international co-operation including further research needs, training and capacity building. **EngLits-Oliver Twist (pdf)** InterLingua Publishing Detailed summaries of great literature. **Twelve Step Facilitation Therapy Manual A Clinical Research Guide for Therapists Treating Individuals with Alcohol Abuse and Dependence Medication for the Treatment of Alcohol Use Disorder: A Brief Guide** Lulu.com Current evidence shows that medications are underused in the treatment of alcohol use disorder, including alcohol abuse and dependence.* * Within this document "alcohol abuse" and "alcohol dependence" are used when discussing medication indications or research that is based upon this terminology. This is of concern because of the high prevalence of alcohol problems in the general population.1,2 For example, data show that an estimated 10 percent to 20 percent of patients seen in primary care or hospital settings have a diagnosable alcohol use disorder.3,4 People who engage in risky drinking often have physical and social problems related to their alcohol use. Problems with alcohol influence the incidence, course, and treatment of many other medical and psychiatric conditions. **The Death of Ivan Ilych Popular Books by Leo Tolstoy : All times Bestseller Demanding Books** BEYOND BOOKS HUB The Death of Ivan Ilyich, first published in 1886, is a novella by Leo Tolstoy, considered one of the masterpieces of his late fiction, written shortly after his religious conversion of the late 1870s. **Caring for Older People in the Community** John Wiley & Sons Caring for older people encompasses complex physical, social and psychological needs, and poses many diverse challenges for nurses.
