Australia Financial System Stability Assessment International Monetary Fund This paper presents Financial System Stability Assessment of Australian financial systems. The report highlights that financial supervision and systemic risk oversight have been enhanced. And the authorities have taken successful policy action to calm rapid growth in riskier segments of the mortgage market. Restrictions on the growth of investor loans and the share of interest-only mortgages, as well as the introduction of stronger lending standards, appear to have led to a slowdown in mortgage credit growth, and the housing market is now cooling. Financial supervision shows generally high conformity to international best practices, although there are opportunities to close identified gaps and strengthen arrangements. Steps are recommended to bolster the independence and resourcing of the regulatory agencies, by removing constraints on their policy making powers and providing additional budgetary autonomy and flexibility. The paper explains that greater formalization and transparency of the work of the Council of Financial Regulators would further buttress the financial stability framework. In addition, some banks are vulnerable to market losses arising from a rapid increase in interest rates, given their significant exposures to fixed income securities. Near-term funding and liquidity risks seem limited, but funding challenges are likely to grow. Several banks are heavily reliant on central bank funding. Based on these findings, the authorities are encouraged to continue to monitor closely interest rate and government bond market risks in their stress testing exercises. Accounting Information Systems Revised edition of the authors' Accounting information systems, [2015] Risk Disclosure in the European Banking Industry Qualitative and Quantitative Content Analysis Methodologies Springer Nature This book analyses the use of qualitative and quantitative content analysis methodologies for risk disclosure practices in the European banking industry. While doing so, it assesses the level of transparency of financial and non-financial reports by focusing on the information disclosed to the public with reference to risk exposure and management. By drawing upon both qualitative and quantitative techniques, the book proposes two different methodological approaches to assess the information European financial institutions provide to the public with reference to the risk disclosure and derivative disclosure in their annual financial reports. These methodologies are subsequently employed to carry out empirical analyses on samples of European banks. By exploiting the points of strength of both qualitative and quantitative content analysis methodologies, this book offers insights into the advantages and disadvantages of these methodologies. The book is a must-read for academics and researchers that analyze disclosure practices of financial and non-financial firms, as well as financial analysts and other practitioners that are interested in assessing the level of transparency and evaluating the disclosures of financial and non-financial firms, especially, but not exclusively, with reference to risk disclosure and derivative disclosure.
