Encyclopedia of Curriculum Studies SAGE The Encyclopedia of Curriculum Studies provides a comprehensive introduction to the academic field of curriculum studies for the scholar, student, teacher, and administrator. The study of curriculum, beginning in the early 20th century, served primarily the areas of school administration and teaching and was seen as a method to design and develop programs of study. The field subsequently expanded to draw upon disciplines from the arts, humanities, and social sciences and to examine larger educational forces and their effects upon the individual, society, and conceptions of knowledge. Curriculum studies has now emerged to embrace an expansive and contested conception of academic scholarship while focusing upon a diverse and complex dynamic among educational experiences, practices, settings, actions, and theories in relation to personal and institutional needs and interests. The Encyclopedia of Curriculum Studies serves to inform and to introduce terms, events, documents, biographies, and concepts to assist the reader in understanding aspects of this rapidly changing field of study. Representative topics include: Origins, definitions, dimensions, and variations on Curriculum Studies Curriculum development and design for schools Curricular purpose, implementation, and evaluation Contemporary issues, e.g., standards, tests, and accountability Curricular dimensions of teaching and teacher education Interdisciplinary perspectives on institutionalized curriculum Informal curricula of homes, mass media, workplaces, organizations, and relationships Impact of race, class, gender, health, belief, appearance, place, ethnicity, language Relationships of curriculum and poverty, wealth, and related factors Modes of curriculum inquiry and research Curriculum as cultural studies, exploring the formation of identities and possibilities Corporate, state, church, and military influence as curriculum Global and international perspectives on curriculum Curriculum organizations, journals, and resources Summaries of books and articles on curriculum studies Biographic vignettes of key persons in curriculum studies Relevant photographs Parentology Everything You Wanted to Know about the Science of Raising Children but Were Too Exhausted to Ask Simon and Schuster An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time. Sage 50 Accounts For Dummies John Wiley & Sons NOW UPDATED FOR THE 2011 VERSION OF SAGE 50! Warner Schaie I am pleased to write a foreword for this interesting volume, particularly as over many years, I have had the privilege of interacting with the editors and a majority of the contributors in various professional roles as a colleague, mentor, or research collaborator. The editors begin their introduction by asking why one would want to read yet another book on human development. They immediately answer their question by pointing out that many developmentally oriented texts and other treatises neglect the theoretical foundations of human development and fail to embed psychological constructs within the multidisciplinary context so essential to understanding development. This volume provides a positive remedy to past deficiencies in volumes on human development with a well-organized structure that leads the reader from a general introduction through the basic processes to methodological issues and the relation of developmental constructs to social context and biological infrastructure. This approach does not surprise. After all, the editors and most of the contributors at one time or another had a connection to the Max Planck Institute of Human Development in Berlin, whether as students, junior scientists, or senior visitors. That institute, under the leadership of Paul Baltes, has been instrumental in pursuing a systematic lifespan approach to the study of cognition and personality. Over the past two decades, it has influenced the careers of a generation of scientists who have advocated long-term studies of human development in an interdisciplinary context.
