A Proposed Framework for Integration of Quality Performance Measures for Health Literacy, Cultural

Competence, and Language Access Services Proceedings of a Workshop

National Academies Press Health literacy, cultural competence, and language access services are distinct but inextricably linked concepts for delivering equitable care to all members of the increasingly diverse population of the United States. These concepts are linked, but they developed via different paths, and each has its own unique focus with regard to enabling every individual to obtain the ability to process and understand basic health information and services needed to make appropriate health care decisions. Fragmentation of these disciplines has impeded implementation of relevant measures for quality improvement and accountability. To foster an integrated approach to health literacy, cultural competency, and language access services, the Roundtable on Health Literacy initiated a project with three components: a commissioned paper to propose a framework for integrating measurements of health literacy, cultural competency, and language access; a workshop to review and discuss the framework; and a second commissioned paper that will provide a roadmap for integrating health literacy, cultural competency, and language access services as well as a revised measurement framework. Held on May 4, 2017, the workshop explored the quality performance measures for integration of health literacy, cultural competence, and language access services. This publication summarizes the presentations and discussions from the workshop.

Crisis Standards of Care

A Toolkit for Indicators and Triggers

National Academies Press Disasters and public health emergencies can stress health care systems to the breaking point and disrupt delivery of vital medical services. During such crises, hospitals and long-term care facilities may be without power; trained staff, ambulances, medical supplies and beds could be in short supply; and alternate care facilities may need to be used. Planning for these situations is necessary to provide the best possible health care during a crisis and, if needed, equitably allocate scarce resources. Crisis Standards of Care: A Toolkit for Indicators and Triggers examines indicators and triggers that guide the implementation of crisis standards of care and provides a discussion toolkit to help stakeholders establish indicators and triggers for their own communities. Together, indicators and triggers help guide operational decision making about providing care during public health and medical emergencies and disasters. Indicators and triggers represent the information and actions taken at specific thresholds that guide incident recognition, response, and recovery. This report discusses indicators and triggers for both a slow onset scenario, such as pandemic influenza, and a no-notice scenario, such as an earthquake. Crisis Standards of Care features discussion toolkits customized to help various stakeholders develop indicators and triggers for their own organizations, agencies, and jurisdictions. The toolkit contains scenarios, key questions, and examples of indicators, triggers, and tactics to help promote discussion. In addition to common elements designed to facilitate integrated planning, the toolkit contains chapters specifically customized for emergency management, public health, emergency medical services, hospital and acute care, and out-of-hospital care.

Annual accountability hearing with the General Medical Council

eighth report of session 2010-12, report, together with formal minutes, oral and written evidence

The Stationery Office The Health Committee reports on the annual accountability hearings with the General Medical Council (GMC) (HC 1429) and Nursing and Midwifery Council (NMC) (HC 1428). The reports call for doctors and nurses to develop a wider responsibility for the overall quality of care delivered to patients and they have an obligation as professionals to report to their professional body any concerns they have about the quality of care being delivered by their colleagues. The GMC and the NMC must give a strong lead in this area and ensure that failure to act on this responsibility is regarded as a serious breach of professional obligation. The Committee stresses that both regulators need to have effective revalidation processes in place so that they can periodically check on how doctors and nurses are performing. Whilst the GMC is recognised as a high performing medical regulator, the report calls for: greater transparency in the process for doctors seeking to remove themselves from the medical register; stronger performance management of 'fitness to practice panellists' involved in adjudication of complaints; a clear right of appeal for the GMC so that it can challenge adjudication panel decisions it feels are unduly lenient. Government and both regulators must speed up efforts to resolve the serious problems posed by doctors and nurses who qualify elsewhere in Europe, and earn the right to work in the UK without having their language or medical skills tested. The UK and European law that underpins the workings of both regulators needs a complete overhaul.
