FSIS collects a voluminous amount of data in support of its regulatory functions, but the two major types of FSIS data that are currently being considered for public release are sampling and testing data (derived from standard laboratory tests) and inspection and enforcement data (derived from text written by inspectors). Some of those data are already released to the public in aggregated form but not in disaggregated, establishment-specific form. In recent years, the Obama administration has implemented measures to facilitate openness in government, including the requirement that federal agencies publish information online and provide public access to information in a timely manner; in a form that can be easily retrieved, downloaded, indexed, and searched with tools that are available on the Internet; and without the need for Freedom of Information Act (FOIA) requests. **The Potential Consequences of Public Release of Food Safety and Inspection Service Establishment-Specific Data** examines the potential food-safety benefits and other consequences of making establishment-specific data publicly available on the Internet. The report includes how factors such as level of aggregation, timing of release, level of completeness, and characterization of the data or context in which the data are presented might affect their utility in improving food safety. The report also examines potential ways that food-safety benefits and other effects of publicly posting the data might be measured. **PEFA, Public Financial Management, and Good Governance** *World Bank Publications* This project, based on the Public Expenditure and Financial Accountability (PEFA) data set, researched how PEFA can be used to shape policy development in public financial management (PFM) and other major relevant policy areas such as anticorruption, revenue mobilization, political economy analysis, and fragile states. The report explores what shapes the PFM system in low- and middle-income countries by examining the relationship between political institutions and the quality of the PFM system. Although the report finds some evidence that multiple political parties in control of the legislature is associated with better PFM performance, the report finds the need to further refine and test the theories

on the relationship between political institutions and PFM. The report addresses the question of the outcomes of PFM systems, distinguishing between fragile and nonfragile states. It finds that better PFM performance is associated with more reliable budgets in terms of expenditure composition in fragile states, but not aggregate budget credibility. Moreover, in contrast to existing studies, it finds no evidence that PFM quality matters for deficit and debt ratios, irrespective of whether a country is fragile or not. The report also explores the relationship between perceptions of corruption and PFM performance. It finds strong evidence of a relationship between better PFM performance and improvements in perceptions of corruption. It also finds that PFM reforms associated with better controls have a stronger relationship with improvements in perceptions of corruption compared to PFM reforms associated with more transparency. The last chapter looks at the relationship between PEFA indicators for revenue administration and domestic resource mobilization. It focuses on the credible use of penalties for noncompliance as a proxy for the type of political commitment required to improve tax performance. The analysis shows that countries that credibly enforce penalties for noncompliance collect more taxes on average.

The Future of Public Administration around the World The Minnowbrook Perspective *Georgetown University Press* A once-in-a-generation event held every twenty years, the Minnowbrook conference brings together the top scholars in public administration and public management to reflect on the state of the field and its future. This unique volume brings together a group of distinguished authors—both seasoned and new—for a rare critical examination of the field of public administration yesterday, today, and tomorrow. The book begins by examining the ideas of previous Minnowbrook conferences, such as relevance and change, which are reflective of the 1960s and 1980s. It then moves beyond old Minnowbrook concepts to focus on public administration challenges of the future: globalism, twenty-first century collaborative governance, the role of information technology in governance, deliberative democracy and public participation, the organization of the future, and teaching the next generation of leaders. The book ends by coming full circle to examine the current challenge of remaining relevant. There is no other book like this—nor is there ever likely to be another—in print. Simply put, the ideas, concepts, and spirit of Minnowbrook are one-of-a-kind. This book captures the soul of public administration past, present, and future, and is a must-read for anyone serious about the theory and practice of public administration.

Preventing Corruption in Asia Institutional Design and Policy Capacity *Routledge* Despite intensified governmental and public efforts at corruption control in recent years, official transgression continues to surface in various ways of abusing the unique power and trust that a government holds. Preventing Corruption in Asia addresses a number of crucial questions: -What institutional arrangements are necessary to ensure a clean and honest government? - What self-regulatory capabilities must government institutions develop in order to maintain integrity? - How should a sense of ethical responsibility be instilled in the civil services? -Do special anti-corruption agencies help keep government clean? -How will a regulatory framework of official conduct work properly? -How useful are anti-corruption campaigns in containing corruption? Focusing on a number of carefully selected countries in the Asia and Pacific region, the book sets as its focal point the choice of institutional design in preventing corruption, rather than treating corruption as a practical or technical problem to be corrected by strong political will and good anti-corruption policy measures. While focusing on institutional designs and policy choices, the book also examines other aspects of clean government such as the social environment, legal and regulatory framework, role of the public, and the impact of culture.

The theory is underpinned by seven wide-ranging case studies of innovation in practice. Flexibility / Esneklik *IJOPEC* Despite the wide range they come from, many of the papers in this book emphasize the radical changes concerning flexible practices and policies spreading worldwide and point to neo-liberal globalization, emerged as a solution to the crisis of capitalism in the 1970s, as one of the most important sources of these processes. We think that it is possible to display the dynamics of this transformation concerning flexibility and to develop alternative policies and practices across the world, as the papers in this collection attempt to do. So, we hope that, this would provide significant contribution to solving the problems caused by flexible practices and policies.

The Handbook of Public Sector Communication *John Wiley & Sons* A multidisciplinary collection on global public entity strategic communication Research into public sector communication investigates the interaction between public and governmental entities and citizens within their sphere of influence. Today's public sector organizations are operating in environments where people receive their information from multiple sources. Public sector organizations need to develop "communicative intelligence" in balancing their institutional agendas and aims of public engagement. The Handbook

This timely, innovative volume examines the societal role, environment, goals, practices, and development of public sector strategic communication. International in scope, this handbook describes and analyzes the contexts, policies, issues, and questions that shape public sector communication. The overriding question explored by the authors is how public leadership across the globe addresses new challenges (such as security, financial, demographic), new expectations of leaders, and what public sector leadership means in the new era. The book allows the reader to view a large number of situations across the globe to better understand the relation between context and leadership. It integrates the two fields of leadership and public administration, providing a wide-ranging and complementary empirical context to the topic. Transcending state-centered perspectives, the authors include new developments in governance and public private sector collaboration while retaining a focus on the public values involved. The chapters address public sector leadership issues in a wide array of nations, integrating international perspectives with a globally diverse authorship. Several chapters address issues of collaboration across sectors, changing roles in the New Public Management paradigm, and corresponding new visions of leadership. Several of the chapters are explicitly comparative, including a study of mental health leadership training topics in eight nations, central banking in Europe, and efficiency studies in Britain, Denmark, and Norway. The chapters can be used as thought-provoking case studies as part of a supplemental text, and are accompanied by substantial bibliographies. Scholars, students, and practitioners in leadership, public policy and administration, and organization studies will find this volume a useful reference. *The British Study Edition of the Urantia Papers Book [eReader PDF]* Tigran Aivazian The British Study Edition of the Urantia Papers is based on the standard SRT text, but uses the metric system and adds a critical apparatus of textual variants and study notes. *Proceedings of IAC-EeL 2014 International Academic Conference on Education and E-learning in Prague* IAC-EeL 2014 MAC Prague consulting *Value and Virtue in Public Administration A Comparative Perspective* Springer A multidisciplinary analysis of the role of values and virtue in public administration, this book calls for a rediscovery of virtue. From a broad perspective this book covers various concepts including prevention, preparedness, response, and recovery, as well as vulnerability and risk assessment that need to be understood by those in the emergency management field"-- Culture, philosophies and reforms in public administration for the globalizing world A reflection on local, regional and international perspectives AOSIS The aim of this scholarly collected work is to contribute to the scientific discourse on public administration in a globalised environment. The book reflects on governance challenges in South Africa and in Africa, with its point of departure being the 'master narratives' (the so-called grand debates) such as New Public Management and, specifically, the role of technology. It

also reflects on the so-called middle range discourses concerning organisational-level issues in government (e.g. leadership and work procedures) and explores new solutions to old governance challenges like corruption and service delivery. The uniqueness of this collected work lies in its ability to reflect on existing philosophies and practices in an innovative way. Through its multidisciplinary lens, the book opens up a new vision for the future of public administration in the South African context and on the African continent, not neglecting the current local, regional and global environment. Until recently, globalisation was considered an entrenched world order, but international political events during the course of the past few years have resulted in one of the biggest challenges to its endurance in recent history. This includes developments such as the successful referendum in Britain to exit the European Union, highlighting the growth of a severe nationalist and protectionist agenda that may be a signal of the unravelling of the current globalism world order. These developments inspire deeper interrogation of the challenges to effective public administration globally and the ripple effects in South Africa and Africa as a whole. Pointedly, it is evident that ensuring the voice of citizens in policy decision-making remains a critical governance challenge. On the policy front, there are perennial challenges of land reform, service delivery and poverty, while on the governance front, corruption has metastasised with a growing culture of impunity and lack of accountability in leadership. In the midst of growing corruption, and more than 20 years into democracy, South Africa's income inequality remains one of the highest in the world. This setting constitutes the context of the research outcome published in this scholarly work.

This book critically analyses five arguments which claim there are sufficient means for holding decision-makers to account in the Union. The main conclusion is that the current institutional set-up and practice of decision-making in the EU is one that merely creates an illusion of accountability. Using a strict framework focusing on the difference between formal mechanisms and actual opportunities for accountability, this highly coherent volume will be of interest to students and scholars of European politics, especially those interested in the democratic foundations of the European political system.
