Missing Persons

Multidisciplinary Perspectives on the Disappeared

Canadian Scholars' Press The work of finding and identifying missing persons is complex and requires the expertise of many people, such as historians hunting through archives, biological anthropologists reconstructing skeletons, and psychologists preparing investigators to interview families of the disappeared. Uniting the voices of 22 experts from around the world, Derek Congram's collection of original papers centres its attention on those who are engaged in the location, identification, and repatriation of missing persons. The contributors to this timely volume represent multiple disciplines and various fields, including academia, government, and civil service, but are connected by a shared conviction that accounting for the missing is vital for a just society. The chapters concentrate on victims of physical or structural violence, including armed conflict, repressive regimes, criminal behaviour, and racist and colonial policies towards Indigenous persons and minority populations. Some contexts are familiar—morgues, mass graves, and battlefields—while others are surprising, such as schoolyards and a museum in Canada. Although the circumstances of the disappearances vary greatly, Missing Persons illustrates the connections between these disparate contexts. Multidisciplinary in scope, this edited collection is a valuable comparative resource for students, academics, and practitioners in forensic anthropology, anthropological/archaeological ethics, forensic psychology, criminal justice, and human rights.

Nicomachean Ethics

Phoemixx Classics Ebooks Nicomachean Ethics Aristotle - The Nicomachean Ethics is one of Aristotle's most widely read and influential works. Ideas central to ethics—that happiness is the end of human endeavor, that moral virtue is formed through action and habituation, and that good action requires prudence—found their most powerful proponent in the person medieval scholars simply called "the Philosopher." Drawing on their intimate knowledge of Aristotle's thought, Robert C. Bartlett and Susan D. Collins have produced here an English-language translation of the Ethics that is as remarkably faithful to the original as it is graceful in its rendering. Aristotle is well known for the precision with which he chooses his words, and in this elegant translation his work has found its ideal match. Bartlett and Collins provide copious notes and a glossary providing context and further explanation for students, as well as an introduction and a substantial interpretive essay that sketch central arguments of the work and the seminal place of Aristotle's Ethics in his political philosophy as a whole. The Nicomachean Ethics has engaged the serious interest of readers across centuries and civilizations—of peoples ancient, medieval, and modern; pagan, Christian, Muslim, and Jewish—and this new edition will take its place as the standard English-language translation.

Writing and Publishing Scientific Papers

A Primer for the Non-English Speaker

Open Book Publishers Gábor Lövei's scientific communication course for students and scientists explores the intricacies involved in publishing primary scientific papers, and has been taught in more than twenty countries. Writing and Publishing Scientific Papers is the distillation of Lövei's lecture notes and experience gathered over two decades; it is the coursebook many have been waiting for. The book's three main sections correspond with the three main stages of a paper's journey from idea to print: planning, writing, and publishing. Within the book's chapters, complex questions such as 'How to write the introduction?' or 'How to submit a manuscript?' are broken down into smaller, more manageable problems that are then discussed in a straightforward, conversational manner, providing an easy and enjoyable reading experience. Writing and Publishing Scientific Papers stands out from its field by targeting scientists whose first language is not English. While also touching on matters of style and

grammar, the book's main goal is to advise on first principles of communication. This book is an excellent resource for any student or scientist wishing to learn more about the scientific publishing process and scientific communication. It will be especially useful to those coming from outside the English-speaking world and looking for a comprehensive guide for publishing their work in English.

Making America's Public Lands

The Contested History of Conservation on Federal Lands

Rowman & Littlefield Throughout American history, "public lands" have been the subject of controversy, from homesteaders settling the American west to ranchers who use the open range to promote free enterprise, to wilderness activists who see these lands as wild places. This book shows how these controversies intersect with critical issues of American history.

China's One Belt One Road Initiative

World Scientific Chinese President Xi Jinping launched the Silk Road Economic Belt component of the One Belt One Road (OBOR) initiative at Kazakhstan in 2013. OBOR is a development strategy and framework that focuses on connectivity and cooperation among countries primarily in Eurasia. It consists of two main components, the land-based "Silk Road Economic Belt" (SREB) and ocean-going "Maritime Silk Road" (MSR). This book studies the equilibrium or balance between overland and maritime trade routes of OBOR. This book has two major sections. The interpretive section examines contemporary media narratives related to the OBOR initiative and how contemporary commentators appropriate narratives about historical events related to the maritime Silk Road to interpret current policy agendas and legitimize diplomatic or economic exchanges. In terms of institutional studies, the chapters related to Asian Infrastructure Investment Bank (AIIB) will look at the issues facing the Bank in its quest in forming a new world platform for multilateral development financing. The other section, the empirical case study of the publication highlights the fact that Euro-China High Speed Rail (HSR) and Central Asia-China HSR are not viable at the moment as passenger volume is not sufficient to justify the HSR line. This section examines the overland route of the OBOR and looks at recent Chinese HSR history and conventional sub-high speed rail technology development, and identifies technical & economic criteria determining the appropriate technology for a certain line. The chapter in this section will use the developed criteria to analyze the various rail linkage projects currently under study in the OBOR framework, highlight the economic, bureaucratic and geo-political challenges that these projects likely face and lay down conditions that will determine the outcome of these projects.
