THE BEHAVIOUR, ECOLOGY, AND WELFARE OF ELEPHANTS IN CAPTIVITY

Academic Press This book draws together, for the first time, the published research on the behaviour, ecology and welfare of elephants living in zoos, circuses, logging camps and other captive environments in a single comprehensive volume. It takes a multi-disciplinary approach, considering the work of zoo biologists, animal behaviour and welfare scientists, veterinarians, philosophers, zoo educators, tourism specialists, conservation biologists, lawyers and others with a professional interest in elephants. *Elephants under Human Care: The Behaviour, Ecology, and Welfare of Elephants in Captivity* is a valuable resource for zoo biology and animal welfare researchers. Includes results of captive studies compared with field studies of wild elephants Features original images of elephant behaviour as they live and behave under human care Includes results of the author's original research including many original photographs Considers future implications of research for the welfare and conservation of elephants, both for elephants in captivity and those living in the wild

WORLD WILDLIFE CRIME REPORT 2020

TRAFFICKING IN PROTECTED SPECIES

UN The report presents the latest assessment of global trends in wildlife crime. It includes discussions on illicit rosewood, ivory, rhino horn, pangolin scales, live reptiles, tigers and other big cats, and European eel. The COVID-19 (coronavirus) pandemic has highlighted that wildlife crime is a threat not only to the environment and biodiversity, but also to human health, economic development and security. Zoonotic diseases - those caused by pathogens that spread from animals to humans - represent up to 75% of all emerging infectious diseases. Trafficked wild species and the resulting products offered for human consumption, by definition, escape any hygiene or sanitary control, and therefore pose even greater risks of infection.

MOTHERHOOD, THE ELEPHANT IN THE LABORATORY

WOMEN SCIENTISTS SPEAK OUT

Cornell University Press About half of the undergraduate and roughly 40 percent of graduate degree recipients in science and engineering are women. As increasing numbers of these women pursue research careers in science, many who choose to have children discover the unique difficulties of balancing a professional life in these highly competitive (and often male-dominated) fields with the demands of motherhood. Although this issue directly affects the career advancement of women scientists, it is rarely discussed as a professional concern, leaving individuals to face the dilemma on their own. To address this obvious but unacknowledged crisis—the elephant in the laboratory, according to one scientist—Emily Monosson, an independent toxicologist, has brought together 34 women scientists from overlapping generations and several fields of research—including physics, chemistry, geography, paleontology, and ecology, among others—to share their experiences. From women who began their careers in the 1970s and brought their newborns to work, breastfeeding them under ponchos, to graduate students today, the authors of the candid essays written for this groundbreaking volume reveal a range of career choices: the authors work part-time and full-time; they opt out and then opt back in; they become entrepreneurs and job share; they teach high school and have achieved tenure. The personal stories that comprise *Motherhood, the Elephant in the Laboratory* not only show the many ways in which women can successfully combine motherhood and a career in science but also address and redefine what it means to be a successful scientist. These valuable narratives encourage institutions of higher education and scientific research to accommodate the needs of scientists who decide to have children.

BUT NO ELEPHANTS

BURMESE DAYS

Pan Macmillan In *Burmese Days*, George Orwell, one of the most famous writers in the English language, draws on his own experience of living and working in Burma to write an unflinching novel about the dark side of imperialism. Part of the Macmillan Collector's Library; a series of stunning, clothbound, pocket-sized classics with gold foiled edges and ribbon markers. These beautiful books make perfect gifts or a treat for any book lover. This edition features an introduction by journalist and writer David Eimer. John Flory is a disillusioned timber merchant based in the remote town of Kyauktada in 1920s Burma. Whilst his English peers gather night after night to drink and gossip in their exclusive club, Flory has embraced local life - his best friend is Dr Veraswami and his mistress is Ma Hla May. The slow, sticky, hot days are interrupted by the arrival of the young and beautiful Elizabeth. And when the club is forced to elect a non-white member, Flory is caught up in an increasingly hostile and dangerous feud.

HOW TO WALK ON WATER AND CLIMB UP WALLS

Princeton University Press "Insects walk on water, snakes slither, and fish swim. Animals move with astounding grace, speed, and versatility: how do they do it, and what can we learn from them? In *How to Walk on Water and Climb up Walls*, David Hu takes readers on an accessible, wondrous journey into the world of animal motion. From basement labs at MIT to the rain forests of Panama, Hu shows how animals have adapted and evolved to traverse their environments, taking advantage of physical laws with results that are startling and ingenious. In turn, the latest discoveries about animal mechanics are inspiring scientists to invent robots and devices that move with similar elegance and efficiency. Hu follows scientists as they investigate a multitude of animal movements, from the undulations of sandfish and the way that dogs shake off water in fractions of a second to the seemingly crash-resistant characteristics of insect flight. Not limiting his exploration to individual organisms, Hu describes the ways animals enact swarm intelligence, such as when army ants cooperate and link their bodies to create bridges that span ravines. He also looks at what scientists learn from nature's unexpected feats--such as snakes that fly, mosquitoes that survive rainstorms, and dead fish that swim upstream. As researchers better understand such issues as energy, flexibility, and water repellency in animal movement, they are applying this knowledge to the development of cutting-edge technology. Integrating biology, engineering, physics, and robotics, [this book] demystifies the remarkable mechanics behind animal locomotion"--Page 4 of cover.

MODES OF SPECTATING

Intellect Books The notion of spectatorship has become of increasing interest as artists develop experimental works and manufacturers seek to produce the means for viewing such works. Modes of Spectating explores the visual landscapes which spectators encounter, and how they perceive what they view. The volume questions the effect of different mediums on the spectator and asks not only how we view, but also how what we view determines what artists create. Chapters discuss how gaming and televisual media and entertainment are used by young people, and the resulting psychological challenges of human beings in th.

LAND USE LAW FOR SUSTAINABLE DEVELOPMENT

Cambridge University Press This 2007 book surveys the global experience to date in implementing land-use policies that move us further along the sustainable development continuum. The international community has long recognized the need to ensure ongoing and future development is conducted sustainably. While high-level commitments towards sustainable development such as those included in the Rio and Johannesburg Declarations are politically important, they are irrelevant if they are not translated into reality on the ground. This book includes chapters that discuss the challenges of implementing sustainable land-use policies in different regions of the world, revealing problems that are common to all jurisdictions and highlighting others that are unique to particular regions. It also includes chapters documenting new approaches to sustainable land use, such as reforms to property rights regimes and environmental laws. Other chapters offer comparisons of approaches in different jurisdictions that can present insights which might not be apparent from a single-jurisdiction analysis.
