WHAT A WASTE 2.0

A GLOBAL SNAPSHOT OF SOLID WASTE MANAGEMENT TO 2050

World Bank Publications Solid waste management affects every person in the world. By 2050, the world is expected to increase waste generation by 70 percent, from 2.01 billion tonnes of waste in 2016 to 3.40 billion tonnes of waste annually. Individuals and governments make decisions about consumption and waste management that affect the daily health, productivity, and cleanliness of communities. Poorly managed waste is contaminating the world's oceans, clogging drains and causing flooding, transmitting diseases, increasing respiratory problems, harming animals that consume waste unknowingly, and affecting economic development. Unmanaged and improperly managed waste from decades of economic growth requires urgent action at all levels of society. *What a Waste 2.0: A Global Snapshot of Solid Waste Management to 2050* aggregates extensive solid waste data at the national and urban levels. It estimates and projects waste generation to 2030 and 2050. Beyond the core data metrics from waste generation to disposal, the report provides information on waste management costs, revenues, and tariffs; special wastes; regulations; public communication; administrative and operational models; and the informal sector. Solid waste management accounts for approximately 20 percent of municipal budgets in low-income countries and 10 percent of municipal budgets in middle-income countries, on average. Waste management is often under the jurisdiction of local authorities facing competing priorities and limited resources and capacities in

planning, contract management, and operational monitoring. These factors make sustainable waste management a complicated proposition; most low- and middle-income countries, and their respective cities, are struggling to address these challenges. Waste management data are critical to creating policy and planning for local contexts. Understanding how much waste is generated—especially with rapid urbanization and population growth—as well as the types of waste generated helps local governments to select appropriate management methods and plan for future demand. It allows governments to design a system with a suitable number of vehicles, establish efficient routes, set targets for diversion of waste, track progress, and adapt as consumption patterns change. With accurate data, governments can realistically allocate resources, assess relevant technologies, and consider strategic partners for service provision, such as the private sector or nongovernmental organizations. *What a Waste 2.0: A Global Snapshot of Solid Waste Management to 2050* provides the most up-to-date information available to empower citizens and governments around the world to effectively address the pressing global crisis of waste. Additional information is available at <http://www.worldbank.org/what-a-waste>.

SPORT LAW

A MANAGERIAL APPROACH

Taylor & Francis Sport Law: A Managerial Approach, third edition, merges law and sport management in a way that is accessible and straightforward. Its organization continues to revolve around management functions rather than legal theory. Concise explanations, coupled with relevant industry examples and cases, give readers just enough legal doctrine to understand the important concepts that apply to each area. This book will help prepare students as they get ready to assume a broad range of responsibilities in sport, education, or recreation. Whether readers work as coaches or teachers; administer professional programs; manage fitness/health clubs; or assume roles in a high school, college, Olympic, or professional sport organization, legal concerns will inevitably be woven into their managerial concerns. This book provides knowledge of the law that helps create a competitive advantage and build a more efficient and successful operation that better serves the needs of its constituents. Special Features of the Book Managerial context tables. Chapter-opening exhibits act as organizational and study tools identifying managerial contexts in relation to major legal issues, relevant law, and illustrative cases for the chapter. Case opinions, focus cases, and hypothetical cases. Legal opinions--both excerpted (case opinions) and summarized (focus cases)--illustrate relevant legal points and help readers understand the interplay between fact and legal theory. The cases include questions for discussion, and the instructor's manual provides guidance for the discussion. Hypothetical cases further highlight topics of interest and include discussion questions to facilitate understanding of the material; analysis and possible responses appear at the end of the chapter. Competitive advantage strategies. Highlighted, focused strategies

based on discussions in the text help readers understand how to use the law to make sound operational decisions and will assist them in working effectively with legal counsel. Discussion questions, learning activities, and case studies. Thoughtful and thought-provoking questions and activities emphasize important concepts; they help instructors teach and readers review the material. Creative case studies stimulate readers, as future sport or recreation managers, to analyze situations involving a legal issue presented in the chapter. Annotated websites. Each chapter includes a collection of web resources to help readers explore topics further. Accompanying the web addresses are brief descriptions pointing out key links and the sites' benefits. Bookmarking these sites will help readers in future research or throughout their careers.

COCHRANE HANDBOOK FOR SYSTEMATIC REVIEWS OF INTERVENTIONS

Wiley Healthcare providers, consumers, researchers and policy makers are inundated with unmanageable amounts of information, including evidence from healthcare research. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and incorporate it into healthcare decisions. Cochrane Reviews respond to this challenge by identifying, appraising and synthesizing research-based evidence and presenting it in a standardized format, published in The Cochrane Library (www.thecochranelibrary.com). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. Written in a clear and accessible format, it is the essential manual for all those preparing, maintaining and reading Cochrane reviews. Many of the principles and methods described here are appropriate for systematic reviews applied to other types of research and to systematic reviews of interventions undertaken by others. It is hoped therefore that this book will be invaluable to all those who want to understand the role of systematic reviews, critically appraise published reviews or perform reviews themselves.

REINFORCEMENT LEARNING, SECOND EDITION

AN INTRODUCTION

MIT Press The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

VOLKSWAGEN CHRONICLE

SPANNUNGSFELD FAHRZEUGANTRIEBE - GEDENKSCHRIFT FÜR PROF. DR.-ING. ROLAND BAAR

Universitätsverlag der TU Berlin Prof. Dr.-Ing. Roland Baar, Head of the department of Powertrain Technologies at Technische Universität Berlin, unfortunately deceased on 23 June 2018. Professor Roland Baar rendered an outstanding service to the science of powertrain technologies, especially in the field of turbocharging. His enthusiasm and determination were both a professional and a personal inspiration to everyone who worked with him. To continue Roland Baar's work, his business and academic colleagues dedicate this collection of scientific papers to his memory. The articles in this memorial publication cover different aspects of

powertrain technology research. This topic plays an important part in the current public debate on climate protection, air pollution control and sustainability. The first articles of this book deal with the market situation and the general framework for research and development of powertrains. This lays the foundation for more technical topics. The following articles are concerned with the growing trend of powertrain electrification. They discuss the numeric modeling of alternative drivetrains and the energetic assessment of different powertrain concepts, such as hybrid drives and fuel cells. One of the central topics in this book is the combustion engine, which encompasses both the diesel and the gasoline engine. For instance, the injection of water into gasoline engines is covered extensively as a method to raise the thermodynamic efficiency. Furthermore, there are articles on innovative injection concepts for diesel engines as well as on the use of alternative, regenerative fuels for combustion engines. Many of the articles address the subject of turbocharging of combustion engines, which was a major research topic of Roland Baar. In the present book, a special focus is on the analysis of energy flows and the possibilities of a better modeling of charging units in numerical simulations. The last part of the book contains articles on novel aftertreatments of exhaust gases to reduce pollutant emissions as well as on experimental methods in this field. Am 23. Juni 2018 verstarb Prof. Dr.-Ing. Roland Baar, Leiter des Fachgebiets Fahrzeugantriebe der Technischen Universität Berlin. Roland Baar hat sich insbesondere auf dem Gebiet der Aufladung von Verbrennungsmotoren verdient gemacht und brachte darüber hinaus die Forschung rund um den Fahrzeugantrieb voran. Mit seiner Energie und seiner Entschlossenheit war er für alle, die mit ihm arbeiteten, sowohl fachlich als auch persönlich stets eine Inspiration. Um seine Arbeit fortzuführen, haben seine beruflichen und akademischen Weggefährtinnen und -gefährten ihm sowie seinen Forschungsthemen deshalb diesen Band gewidmet. In dieser Gedenkschrift sind Beiträge versammelt, die sich dem Forschungsfeld Fahrzeugantriebe widmen. Dieses Themengebiet steht auf Grund der aktuellen Fragestellungen hinsichtlich Klimaschutz, Luftreinhaltung und Nachhaltigkeit im Fokus der gesellschaftlichen Debatte. Darstellungen der Marktsituation und der sich daraus ableitenden Randbedingungen für die Erforschung und Entwicklung künftiger Fahrzeugantriebe bilden die Grundlage für die folgenden technischen Themen. Der zunehmende Trend der Elektrifizierung des Antriebsstrangs wird in verschiedenen Beiträgen behandelt. Hier werden die numerische Modellierung alternativer Antriebe sowie die energetische Bewertung verschiedener Antriebskonzepte wie etwa elektro-hybride Antriebe sowie Brennstoffzellenanwendungen diskutiert. Ein Schwerpunkt des Buches ist die diesel- und die ottomotorische Verbrennung. So wird beispielsweise die Wassereinspritzung für Ottomotoren zur Steigerung des thermodynamischen Wirkungsgrades ausführlich behandelt. Ebenso finden innovative Einspritzkonzepte für Dieselmotoren sowie der Einsatz alternativer, regenerativer Kraftstoffe für Verbrennungsmotoren Beachtung. Ein wesentlicher Anteil der Beiträge ist der Aufladung von Verbrennungsmotoren gewidmet – ein Kernthema der Arbeit von Roland Baar. Insbesondere das Verständnis der Energieströme sowie eine Möglichkeit einer verbesserten Modellierung des Aufladeaggregats für die numerische Simulation werden beleuchtet. Weitere Beiträge decken zusätzlich den Bereich neuartiger Abgasnachbehandlungssysteme zur Reduzierung der Schadstoffemissionen sowie experimentelle Methoden zur deren Untersuchung

ab.

MANAGEMENT OF SPINAL CORD INJURIES E-BOOK

A GUIDE FOR PHYSIOTHERAPISTS

Elsevier Health Sciences Combining 25 years of clinical, research and teaching experience, Dr Lisa Harvey provides an innovative 5-step approach to the physiotherapy management of people with spinal cord injury. Based on the International Classification of Functioning, this approach emphasises the importance of setting goals which are purposeful and meaningful to the patient. These goals are related to performance of motor tasks analysed in terms of 6 key impairments. The assessment and treatment performance of each of these impairments for people with spinal cord injury is described in the following chapters: training motor tasks strength training contracture management pain management respiratory management cardiovascular fitness training Dr Harvey develops readers' problem-solving skills equipping them to manage all types of spinal cord injuries. Central to these skills is an understanding of how people with different patterns of paralysis perform motor tasks and the importance of different muscles for motor tasks such as: transfers and bed mobility of people wheelchair mobility hand function for people with tetraplegia standing and walking with lower limb paralysis This book is for students and junior physiotherapists with little or no experience in the area of spinal cord injury but with a general understanding of the principles of physiotherapy. It is also a useful tool for experienced clinicians, including those keen to explore the evidence base that supports different physiotherapy interventions.

INTRODUCTION TO STATISTICAL MODELLING

Springer This book is about generalized linear models as described by Nelder and Wedderburn (1972). This approach provides a unified theoretical and computational framework for the most commonly used statistical methods: regression, analysis of variance and covariance, logistic regression, log-linear models for contingency tables and several more specialized techniques. More advanced

expositions of the subject are given by McCullagh and Nelder (1983) and Andersen (1980). The emphasis is on the use of statistical models to investigate substantive questions rather than to produce mathematical descriptions of the data. Therefore parameter estimation and hypothesis testing are stressed. I have assumed that the reader is familiar with the most commonly used statistical concepts and methods and has some basic knowledge of calculus and matrix algebra. Short numerical examples are used to illustrate the main points. In writing this book I have been helped greatly by the comments and criticism of my students and colleagues, especially Anne Young. However, the choice of material, and the obscurities and errors are my responsibility and I apologize to the reader for any irritation caused by them. For typing the manuscript under difficult conditions I am grateful to Anne McKim, Jan Garnsey, Cath Claydon and Julie Latimer.
