The 50 chapters present a range of theoretical and methodological positions, and arguments to demonstrate the dynamic, challenging and innovative thinking around the subject; locating media theory and practice within the broader concerns of democracy, citizenship, social exclusion, race, class and gender. In addition to research from the UK, the US, Canada, Europe and Australia, the Companion also includes studies from Colombia, Haiti, India, South Korea and Zimbabwe, enabling international comparisons to be made and also allowing for the problematisation of traditional - often Western - approaches to media studies. The Laws of Simplicity

MIT Press **Ten laws of simplicity for business, technology, and design that teach us how to need less but get more. Finally, we are learning that simplicity equals sanity. We're rebelling against technology that's too complicated, DVD players with too many menus, and software accompanied by 75-megabyte "read me" manuals. The iPod's clean gadgetry has made simplicity hip. But sometimes we find ourselves caught up in the simplicity paradox: we want something that's simple and easy to use, but also does all the complex things we might ever want it to do. In The Laws of Simplicity, John Maeda offers ten laws for balancing simplicity and complexity in business, technology, and design—guidelines for needing less and actually getting more. Maeda—a professor in MIT's Media Lab and a world-renowned graphic designer—explores the question of how we can redefine the notion of "improved" so that it doesn't always mean something more, something added on. Maeda's first law of simplicity is "Reduce." It's not necessarily beneficial to add technology features just because we can. And the features that we do have must be organized (Law 2) in a sensible hierarchy so users aren't distracted by features and functions they don't need. But simplicity is not less just for the sake of less. Skip ahead to Law 9: "Failure: Accept the fact that some things can never be made simple." Maeda's concise guide to simplicity in the digital age shows us how this idea can be a cornerstone of organizations and their products—how it can drive both business and technology. We can learn to simplify without sacrificing comfort and meaning, and we can achieve the balance described in Law 10. This law, which Maeda calls "The One," tells us: "Simplicity is about subtracting the obvious, and adding the meaningful."**

Cambridge University Press **A critical assessment of the role that information technologies have come to play in contemporary campaigns.**

Intelligence analysis in social media

Emil Girdan **The global security environment, dominated and dependent on information and communication technology, generates an accumulation of disruptive factors for society. This volume, in direct accordance with technological developments that have facilitated information avalanche and (anonymous) communication, has required interdisciplinary research in areas such as: psychology, sociology, computer science, social media communication and legislation. The research aims to establish whether social media platforms, through the actions they facilitate, can pose risks and threats to national security and to identify premises in order to stimulate strategies that should be followed to avoid transforming various forms of online communication into a potentiating and generating factor of crime, radical or extremist opinions, mass manipulation, etc. At the same time, the research offers an alternative vision on approaching the concept of intelligence in the context of the development of social media networks (SocMInt) and promotes ways to improve and streamline how to achieve objectives that can be successfully applied, including in business intelligence. In this regard, a case study is conducted on the effects of CoVid-19 pandemic (SARS-CoV-2 coronavirus) from the perspective of law enforcement agencies. Although the individually exploitation of SocMInt does not provide a comprehensive answer, it must be used in the initial stages of decision-making and effort-making, due to the low costs compared to other Int disciplines. The volume does not present a solution to current problems, but through its didactic, documentary and informative nature it offers professional support at high standards to analysts and managers in decision making.**

Managing Electronic Media

Making, Moving and Marketing Digital Content

Taylor & Francis **This college-level media management textbook reflects the changes in the media industries that have occurred in the past decade. Today's managers must address new issues that their predecessors never faced, from the threats of professional piracy and casual copying of digital media products, to global networks, on-demand consumption, and changing business models. The book explains the new new vocabulary of media moguls, such as bandwidth, digital rights management, customer relations management, distributed work groups, centralized broadcast operations, automated playlists, server-based playout, repurposing, mobisodes, TV-to-DVD, and content management. The chapters logically unfold the ways that managers are evolving their practices to make content, market it, and deliver it to consumers in a competitive, global digital marketplace. In addition to media companies, this book covers management processes that extend to all content-producing organizations, because today's students are as likely to produce high-quality video and Web video for ABC Computer Sales as they are for the ABC Entertainment Television Network.**

Folk Devils and Moral Panics

The Creation of the Mods and Rockers

Taylor & Francis US **'Richly documented and convincingly presented' -- New Society Mods and Rockers, skinheads, video nasties, designer drugs, bogus asylum seeks and hoodies. Every era has its own moral panics. It was Stanley Cohen's classic account, first published in the early 1970s and regularly revised, that brought the term 'moral panic' into widespread discussion. It is an outstanding investigation of the way in which the media and often those in a position of political power define a condition, or group, as a threat to societal values and interests. Fanned by screaming media headlines, Cohen brilliantly demonstrates how this leads to such groups being marginalised and vilified in the popular imagination, inhibiting rational debate about solutions to the social problems such groups represent. Furthermore, he argues that moral panics go even further by identifying the very fault lines of power in society. Full of sharp insight and analysis, Folk Devils and Moral Panics is essential reading for anyone wanting to understand this powerful and**

enduring phenomenon. Professor Stanley Cohen is Emeritus Professor of Sociology at the London School of Economics. He received the Sellin-Glueck Award of the American Society of Criminology (1985) and is on the Board of the International Council on Human Rights. He is a member of the British Academy.

Platform Capitalism

John Wiley & Sons **What unites Google and Facebook, Apple and Microsoft, Siemens and GE, Uber and Airbnb? Across a wide range of sectors, these firms are transforming themselves into platforms: businesses that provide the hardware and software foundation for others to operate on. This transformation signals a major shift in how capitalist firms operate and how they interact with the rest of the economy: the emergence of platform capitalism. This book critically examines these new business forms, tracing their genesis from the long downturn of the 1970s to the boom and bust of the 1990s and the aftershocks of the 2008 crisis. It shows how the fundamental foundations of the economy are rapidly being carved up among a small number of monopolistic platforms, and how the platform introduces new tendencies within capitalism that pose significant challenges to any vision of a post-capitalist future. This book will be essential reading for anyone who wants to understand how the most powerful tech companies of our time are transforming the global economy."**

Among the Firsts: Lieutenant Colonel Gerhard L. Bolland's Unconventional War

D-Day 82nd Airborne Paratrooper, OSS Special Forces Commander of Operation Rype

Casemate **In his own words, the war of the doubly pioneering Lt Col Gerhard L. Bolland—82nd Airborne paratrooper on D-Day and senior OSS field operative on Operation Rype. Unconventional warfare tactics can have a considerable effect on the outcome of any war. During World War II, the United States government developed and employed two new methods of fighting. The first was the development of "paratroop" units, as they were first called. The second was the formation of a covert and sabotage operations branch called the Office of Strategic Services (OSS). Lt. Colonel Bolland was involved in both of these "firsts." During the D-Day invasion he parachuted behind enemy lines, jumping out of the 82nd Airborne lead aircraft with General James Gavin. After fighting with the 507th Parachute Infantry Regiment for thirty-three days straight, he returned to England and became involved with the OSS Scandinavian Section. He served as Field Commander for their Operation, code named Rype. This was the only American military undertaking, albeit covert, in Norway during the entire course of the war. As a young boy growing up in rural western Minnesota, Bolland got his military start with the Minnesota National Guard, before being accepted to West Point, solely on merit. His military career lasted seventeen years. Lt. Colonel Bolland ended up with numerous decorations including the Norwegian Liberation Medal and Citation, the Bronze Star for valor, the French Fouragerre of Croix de Guerre with Palms and posthumously the Congressional Gold medal awarded to the OSS Society on behalf of all former OSS members that served during the war. His story reveals the struggles, successes, failures and ultimate victories, detailing what went right and what went wrong with these new unconventional methods of fighting.**

#ICT4HR

Information and Communication Technologies for Human Rights

World Bank Publications **"The linkage between information and communication technologies (ICT) and human rights is a subject that has not received a lot of attention until recently. A new report, ICT for Human Rights, is an effort to contribute to the studies in this field by providing new knowledge and experience of the nexus between protection and promotion of human rights, and the use of ICT. The study has been led by Professor Molly Land at New York Law School and her colleagues. Within the World Bank, Tiago Peixoto from the World Bank Institute (WBI) and Hans-Otto Sano of the Nordic Trust Fund were involved in commissioning the work. A series of consultations were held between the World Bank staff and Professor Land and her colleagues, including other members of the writing team — Patrick Meier, Mark Belinsky and Emily Jacobi. Patrick Boyle, Christoph Doellefeld, Adam Gartenberg, Meredith Hutchison, John Kelly, Joe Raffanello and Carl Zander provided excellent research and drafting assistance. After a review of the draft in May 2012, the final report was presented by Professor Land at a broader World Bank team on July 17th, 2012. The study's co-sponsor ICT4Gov-ODTA project at the WBI has now run for nearly three years, supported by the Nordic Trust Fund and directed by WBI's Senior Governance Specialist Boris Weber. While most of the work of the project highlighted in this report focuses on country activities in the intersection of governance and human rights, the report opens the space for learning at a general and cross-cutting level, including reports from a number of country case studies in Eastern Africa, in Central America, and globally. The academic study of these processes is varied and interdisciplinary, but much of the literature has been organized according to discipline. Seeking to cross disciplinary boundaries, this timely book brings together researchers in fields ranging from international law, international relations, and political science to business studies and philosophy to explore the theme of responsible state behavior in cyberspace. . Divided into three parts, Governing Cyberspace first looks at current debates in and about international law and diplomacy in cyberspace. How does international law regulate state behaviour and what are its limits? How do cyber superpowers like China and Russia shape their foreign policy in relation to cyberspace? The second focuses on power and governance. What is the role for international organisations like NATO or for substate actors like intelligence agencies? How do they adapt to the realities of cyberspace and digital conflict? How does the classic balance of power play out in cyberspace and how do different states position themselves? The third part takes a critical look at multistakeholder and corporate diplomacy. How do global tech companies shape their role as norm entrepreneurs in cyberspace, and how do their cyber diplomatic efforts relate to their corporate identity?**
