TOWARD A THEORY OF SPACEPOWER

Createspace Independent Publishing Platform *This volume is a product of the efforts of the Institute for National Strategic Studies Spacepower Theory Project Team, which was tasked by the Department of Defense to create a theoretical framework for examining spacepower and its relationship to the achievement of national objectives. The team was charged with considering the space domain in a broad and holistic way, incorporating a wide range of perspectives from U.S. and international space actors engaged in scientific, commercial, intelligence, and military enterprises. This collection of papers commissioned by the team serves as a starting point for continued discourse on ways to extend, modify, refine, and integrate a broad range of viewpoints about human-initiated space activity, its relationship to our globalized society, and its economic, political, and security interactions. It will equip practitioners, scholars, students, and citizens with the historical background and conceptual framework to navigate through and assess the challenges and opportunities of an increasingly complex space environment.*

OPTICAL AND MICROWAVE TECHNOLOGIES FOR TELECOMMUNICATION NETWORKS

John Wiley & Sons *This is a self-contained book on the foundations and applications of optical and microwave technologies to telecommunication networks application, with an emphasis on access, local, road, cars, trains, vessels and airplanes, indoor and in-car data transmission as well as for long-distance fiber-systems and application in outer space and automation technology. The book provides a systematic discussion of physics/optics, electromagnetic wave theory, optical fibre technology, and the potential and limitations of optical and microwave transmission.*

THE NEW GLOBAL ECOSYSTEM IN ADVANCED COMPUTING

IMPLICATIONS FOR U.S. COMPETITIVENESS AND NATIONAL SECURITY

National Academies Press *Computing and information and communications technology (ICT) has dramatically changed how we work and live, has had profound effects on nearly every sector of society, has transformed whole industries, and is a key component of U.S. global leadership. A fundamental driver of advances in computing and ICT has been the fact that the single-processor performance has, until recently, been steadily and dramatically increasing year over years, based on a combination of architectural techniques, semiconductor advances, and software improvements. Users, developers, and innovators were able to depend on those increases, translating that performance into numerous technological innovations and creating successive generations of ever more rich and diverse products, software services, and applications that had profound effects across all sectors of society. However, we can no longer depend on those extraordinary advances in single-processor performance continuing. This slowdown in the growth of single-processor computing performance has its roots in fundamental physics and engineering constraints--multiple technological barriers have converged to pose deep research challenges, and the consequences of this shift are deep and profound for computing and for the sectors of the economy that depend on and assume, implicitly or explicitly, ever-increasing performance. From a technology standpoint, these challenges have led to heterogeneous multicore chips and a shift to alternate innovation axes that include, but are not limited to, improving chip performance, mobile devices, and cloud services. As these technical shifts reshape the computing industry, with global consequences, the United States must be prepared to exploit new opportunities and to deal with technical challenges. The New Global Ecosystem in Advanced Computing: Implications for U.S. Competitiveness and National Security outlines the technical challenges, describe the global*

research landscape, and explore implications for competition and national security.

PLASMA PROCESSES AND POLYMERS

16TH INTERNATIONAL SYMPOSIUM ON PLASMA CHEMISTRY TAORMINA, ITALY JUNE 22-27, 2003

John Wiley & Sons This volume compiles essential contributions to the most innovative fields of Plasma Processes and Polymers. High-quality contributions cover the fields of plasma deposition, plasma treatment of polymers and other organic compounds, plasma processes under partial vacuum and at atmospheric pressure, biomedical, textile, automotive, and optical applications as well as surface treatment of bulk materials, clusters, particles and powders. This unique collection of refereed papers is based on the best contributions presented at the 16th International Symposium on Plasma Chemistry in Taormina, Italy (ISPC-16, June 2003). A high class reference of relevance to a large audience in plasma community as well as in the area of its industrial applications.

THE SHORT SELLING (AMENDMENT) (EU EXIT) REGULATIONS 2018

Enabling power: European Union (Withdrawal) Act 2018, s. 8 (1). Issued: 12.10.2018. Sifted: -. Made: -. Laid: -. Coming into force: -. Effect: 2000 c.16 amended. Territorial extent & classification: E/W/S/NI. For approval by resolution of each House of Parliament. EC note: These Regulations are made in exercise of the powers in section 8 of the European Union (Withdrawal) Act 2018 in order to address failures of retained EU law to operate effectively and other deficiencies arising from the withdrawal of the United Kingdom from the European Union (and in particular the deficiencies referred to in subsection (2)(b), (c), (d), (e) and (g) of section 8). They amend the regulation on short selling and certain aspects of credit default swaps (Council Regulation (EU) No 236/2012) and the delegated legislation made by the Commission under that Regulation. They also amend Part 8A of the Financial Services and Markets Act 2000 which implemented parts of Regulation (EU) No 236/2012.

GLOBAL MARKETING

CONTEMPORARY THEORY, PRACTICE, AND CASES

Routledge *Global Marketing, 3rd edition, provides students with a truly international treatment of the key principles that every marketing manager should grasp. International markets present different challenges that require a marketer to think strategically and apply tools and techniques creatively in order to respond decisively within a fiercely competitive environment. Alon et al. provide students with everything they need to rise to the challenge: Coverage of small and medium enterprises, as well as multinational corporations, where much of the growth in international trade and global marketing has occurred; A shift toward greater consideration of services marketing as more companies move away from manufacturing; A shift from developed markets to emerging markets with more dynamic environments A focus on emerging markets to equip students with the skills necessary to take advantage of the opportunities that these rapidly growing regions present; Chapters on social media, innovation, and technology teaching students how to incorporate these new tools into their marketing strategy; New material on sustainability, ethics, and corporate social responsibility; key values for any modern business; Short and long cases and examples throughout the text show students how these principles and techniques are applied in the real world; Covering key topics not found in competing books, Global Marketing will equip today's students with the knowledge and confidence they need to become leading marketing managers. A companion website features an instructor's manual with test questions, as well as additional exercises and examples for in-class use.*
