The Kawasaki Story

Racing and Production Models from 1963 to the Present Day

Haynes Publishing Group Although it is Japans smallest motorcycle manufacturer, Kawasaki has had a huge impact on the motorcycling world. Here is the full story of this famous marque, including road and competition bikes. Ian Falloon delivers the background history of the Kawasaki company; chronicles the early racing days; Kawasakis two-stroke production bikes; the Green Meanies - the HR version of the 500cc four-stroke; the highly successful Superbike and Endurance racers of the 1970s; and the bikes of the 1990s which ushered in a new era of performance up through the ZX-12R introduced for 2000.

The Cabinet of Eros

Renaissance Mythological Painting and the Studiolo of Isabella D'Este

Yale University Press The Renaissance studiolo was a space devoted in theory to private reading. The most famous studiolo of all was that of Isabella d'Este, marchioness of Mantua. This work explores the function of the mythological image within a Renaissance culture of collectors.

How to Tune and Modify Motorcycle Engine Management Systems

MotorBooks International From electronic ignition to electronic fuel injection, slipper clutches to traction control, today's motorcycles are made up of much more than an engine, frame, and two wheels. And, just as the bikes themselves have changed, so have the tools with which we tune them. *How to Tune and Modify Motorcycle Engine Management Systems* addresses all of a modern motorcycle's engine-control systems and tells you how to get the most out of today's bikes. Topics covered include: How fuel injection works Aftermarket fuel injection systems Open-loop and closed-loop EFI systems Fuel injection products and services Tuning and troubleshooting Getting more power from your motorcycle engine Diagnostic tools Electronic throttle control (ETC) Knock control systems Modern fuels Interactive computer-controlled exhaust systems

Motorcycle Workshop Practice Techbook

Haynes Manuals N. America, Incorporated Haynes has discovered all the problems that motorcycle owners could possibly encounter when rebuilding or repairing their bikes. Documenting the most common DIY fixes with hundreds of illustrations and step-by-step instructions, this compendium of repair, modification and troubleshooting advice is applicable to all domestic and import marques.

Classic Motorcycle Restoration and Maintenance

Crowood A complete workshop guide to restoring and maintaining your classic British motorcycle. Covering the principles of restoration and maintenance, and therefore applicable across all post-war classic British marques such as BSA, Matchless, Triumph, Norton, AJS and Royal Enfield, Classic Motorcycle Restoration and Maintenance covers everything from general maintenance procedures to full engine strips and rebuilds. With step-by-step instructions and over 800 images, the book covers, amongst other things, buying guides, legislation, essential tools, workshop advice, safety, stripping and rebuilding the key components for both singles and twins. The common parts manufacturers, such as Amal, Smiths and Lucas are covered too. With general maintenance, advice, recommended sources and additions included, this new book is an essential resource for the classic motorcycle restorer. The book also covers: a brief history of the rise of the classic motorcycle movement; wiring, fitting and testing the electrical system; cycle parts - restoring the tin-ware, painting and refinishing. Superbly illustrated with 735 colour images and 80 CAD diagrams along with step-by-step instructions.

WALNECK'S CLASSIC CYCLE TRADER, MARCH 1994

Causey Enterprises, LLC

The Complete Motorcycle Nomad

A Guide to Machines, Equipment, People, and Places

Fundamentals of Aircraft and Rocket Propulsion

Springer This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.
