## Resources in Education

## Disappearing Architecture

## From Real to Virtual to Quantum

*Springer Science & Business Media* **The creation of new environments through the use of developments in Information Technology is significantly altering not only architecture itself but also the roles and tasks of the architects. Architecture can no longer be described in the terms we are familiar with since it no longer corresponds to the form of architecture as we know it: an inclusive and exclusive structure, clearly defined, with a single interior and a single exterior. For architects, the challenge of the future will increasingly lie in creatively coming to terms with hybrid environments, understanding and exploiting the design potential of digital spaces within the physical world, and redefining the role of architecture within a visually dominated culture. This volume presents a valuable and attractive contribution to the contemporary discussion on this subject**

# Performance Management Success

## A Best Practices and Implementation Guide for Leaders and Managers of All Organizations

*Springer* This book provides managers, leaders and practitioners with a dynamic framework that links several variables associated with performance management which can be applied across organizations and industries worldwide. Based on empirical evidence and experiences, this book provides a critical understanding of the interrelationship of organizational culture with performance management process (PMP) planning and implementation. The elements of the framework are approached from a macro-level-view and are balanced with conciseness and realism based on applied success studies, making this book a valuable educational, training and development resource tool for leaders and managers at all levels. The topic of performance in organizations is like the weather—everyone likes to talk about it, but few understand what is truly happening—or understand why? Individuals and organizations are no different when it comes to performance, regardless of performance level of focus: individual, team, unit, or organization-wide. Teams and organizations often miss opportunities to not only improve performance, but also leverage and sustain high performance. Organizational performance, organizational culture and organizational success are interrelated and should reinforce one another. This can be achieved through an effective performance management process (PMP) that lives, functions and thrives at multiple levels within institutions. This book will help organizations and institutions achieve performance management success by identifying comment elements, along with some patterned variation, that are applicable to a successful PMP. Featuring hands-on resource reference tools for immediate use and application, this book is useful for leaders, managers, scholars, students and policy makers in management, leadership, and organizational culture.

# Methods in Ecosystem Science

*Springer Science & Business Media* **Ecology at the ecosystem level has both necessitated and benefited from new methods and technologies as well as those adapted from other disciplines. With the ascendancy of ecosystem science and management, the need has arisen for a comprehensive treatment of techniques used in this rapidly-growing field. Methods in Ecosystem Science answers that need by synthesizing the advantages, disadvantages and tradeoffs associated with the most commonly used techniques in both aquatic and terrestrial research. The book is divided into sections addressing carbon and energy dynamics, nutrient and water dynamics, manipulative ecosystem experiments and tools to synthesize our understanding of ecosystems. Detailed information about various methods will help researchers choose the most appropriate methods for their particular studies. Prominent scientists discuss how tools from a variety of disciplines can be used in ecosystem science at different scales.**

# Visible Learning

## A Synthesis of Over 800 Meta-Analyses Relating to Achievement

*Routledge* This unique and ground-breaking book is the result of 15 years research and synthesises over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers - an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for comparing many innovations in teaching and
