## **THE NEW TECHNOLOGY ELITE**

---

---

### **HOW GREAT COMPANIES OPTIMIZE BOTH TECHNOLOGY CONSUMPTION AND PRODUCTION**

---

*John Wiley & Sons How-to guidance for optimizing incumbent technologies to deliver a better product and gain competitive advantage. Their zip codes are far from Silicon Valley. Their SIC codes show retail, automobile or banking. But industry after industry is waking up to the opportunity of "smart" products and services for their increasingly tech-savvy customers. Traditionally technology buyers, they are learning to embed technology in their products and become technology vendors. In turn, if you analyze Apple, Google, Amazon, Facebook, Twitter and eBay, you marvel at their data centers, retail stores, application ecosystems, global supply chains, design shops. They are considered "consumer" tech but have better technology at larger scale than most enterprises. The old delineation of technology buyer and vendor is obsolete. There is a new definition for the technology elite - and you find them across industries and geographies. The 17 case studies and 4 guest columns spread through The New Technology Elite bring out the elite attributes in detail. Every organization will increasingly be benchmarked against these elite - and soon will be competing against them. Contrasts the productivity that Apple, Google and others have demonstrated in the last decade to that of the average enterprise technology group. Reveals how to leverage what companies have learned from Google, Apple, Amazon.com, and Facebook to your company's advantage. Designed for business practitioners, CEOs, CFOs, CIOs, technology vendors, venture capitalists, IT consultants, marketing executives, and policy makers. Other titles by Vinnie Mirchandani: The New Polymath: Profiles in Compound-Technology Innovations. If you're looking to encourage technology innovation, look no further. The New Technology Elite provides the building blocks your company needs to become innovative through incumbent technologies.*

**LESSONS FROM THE INDUSTRIAL EXCELLENCE AWARD**

---

*Springer Science & Business Media "He who stops getting better has stopped being good. " Hans Schneider, General Manager of the Siemens Amberg Electronics Factory, Industrial Excellence Award overall winner 2007 There is a general perception that inflexible labor markets and high labor costs are contributing to a massive displacement of manufacturing jobs and investment from Western Europe to Eastern Europe and Asia. The debate in Western Europe is highly charged, but sometimes ill-informed. It is true that some low-skilled jobs are moving into low labor cost countries. On the other hand, many more highly skilled jobs are actually being created in the highly developed countries. The total impact on Western economies is much more complicated, and there is some evidence of*

*important benefits. In this book, we showcase examples of excellent industrial management that has managed to create substantial job growth in manufacturing. This book is based on 14 years' observation of the Industrial Excellence Award (IEA) in Germany and France, the first ten years of which we summarized in our previous book, Industrial Excellence (Springer 2003), and on an additional five years of observation between 2002 and 2007. We have seen that management's first and noble responsibility to society is to achieve competitiveness. Competitive organizations create growth and jobs, even in Western Europe. Competitiveness requires clearly articulated strategic positioning, together with excellent execution, and mobilization of all employees to apply their abilities and to pull in one direction.*
